EXECUTIVE SUMMARY

The arrival of hundreds of thousands of refugees at the gates of Europe, mainly from the Syrian war, has given rise to political and social agendas focused on how to receive this population and on border control and surveillance. However, there has not been a sufficiently exhaustive debate about the causes of these population movements. At Centre Delàs we are especially concerned with the role that armaments play in the aggravation and perpetuation of armed conflicts. Given that Europe is one of the centers of arms production and export in all the world, **we ask ourselves if we are in any way responsible for the conditions of violence from which refugees flee, refugees that we do not want to accommodate.**

This report aims to **identify the relationship between arms exports and fluxes of refugees and displaced persons**, with the ultimate goal of determining whether or not EU member states are directly or indirectly responsible for the situations of violence and instability that drive millions of people from their homes each year. **Another objective of this study is to determine whether or not the authorized and realized EU arms exports respect the existing legislation on arms sales.** The legislation referred to is the Common Position 2008/944 /CFSP of December 8th, 2008, which clarifies common parameters for arms exports and defines 22 categories of export materials: ammunition, small arms aircrafts and warships, military transport vehicles and military technology. The relationship between European legislation on arms exports and the situations of insecurity that lead to refugees and internally displaced persons can be established on the basis of criteria X, Y and Z of the Common Position.

- Between 2003 and 2014 there were 89 countries with significant numbers of refugees, some of them also notable for their high number of internally displaced persons. Of these countries, 65 have been in armed conflict or tension during the majority of the 12 years of the study (32 in conflict, 33 in tension). These 65 countries represent 88% of the world's refugees (whose annual average is 30,859,539), 65% of whom come from armed conflicts and 8% of whom come from stress scenarios. Between 2003 and 2014, EU member states used current legislation to export military and military-grade materials to 63 of the 65 prevailing countries in situations of tension or in armed conflict.
- The total value of EU exports authorized between 2003 and 2014 reached €453 billion, with actual exports accounting for €119 billion.
- Of these, 29% of authorizations (122 billion euros) and 31% of realized exports (37 billion euros) have gone to these 63 countries in armed conflict or tension.
- Europe has sold arms to 30 countries in permanent conflict (India, Turkey, Pakistan, Algeria, Indonesia, Israel, Russia, Thailand, Iraq, Afghanistan, Libya, Nigeria, Colombia, the Philippines, Yemen, Lebanon, Ethiopia, Chad, Sri Lanka, Mali, Côte d'Ivoire, Uganda, the Democratic Republic of the Congo, Sudan, Burundi, Moldova, Somalia, the Central African Republic, Nepal, South Sudan) and in none of them has the conflict been resolved.
- Arms sales to some of these destinations have continued despite their worsening security, such as Turkey, Pakistan, Yemen, Ethiopia, Mali, Syria, Burundi, the Central African Republic and Libya.
- We have been able to identify **39 countries that import European armaments as particularly controversial recipients, both for their figures of arms imports and for their volumes of refugees and displaced persons. Of these 39 countries, 26 have demonstrated a stagnant or worsening state of instability**, making them especially sensitive recipients of arms. **There have been 9.326 million euros worth of arms exported and 33.611 million euros worth of exports authorized to these 26 countries**, which tells us that the majority of total exports to the 39 most controversial

destinations have gone to these 26 countries with populations of refugees and displaced persons and precarious conditions of security. During this period, there was an average of 27 million refugees and displaced persons in these countries. The stagnant/worsening conditions of stability in these countries indicate that their continual importation of arms may directly affect their states of security.

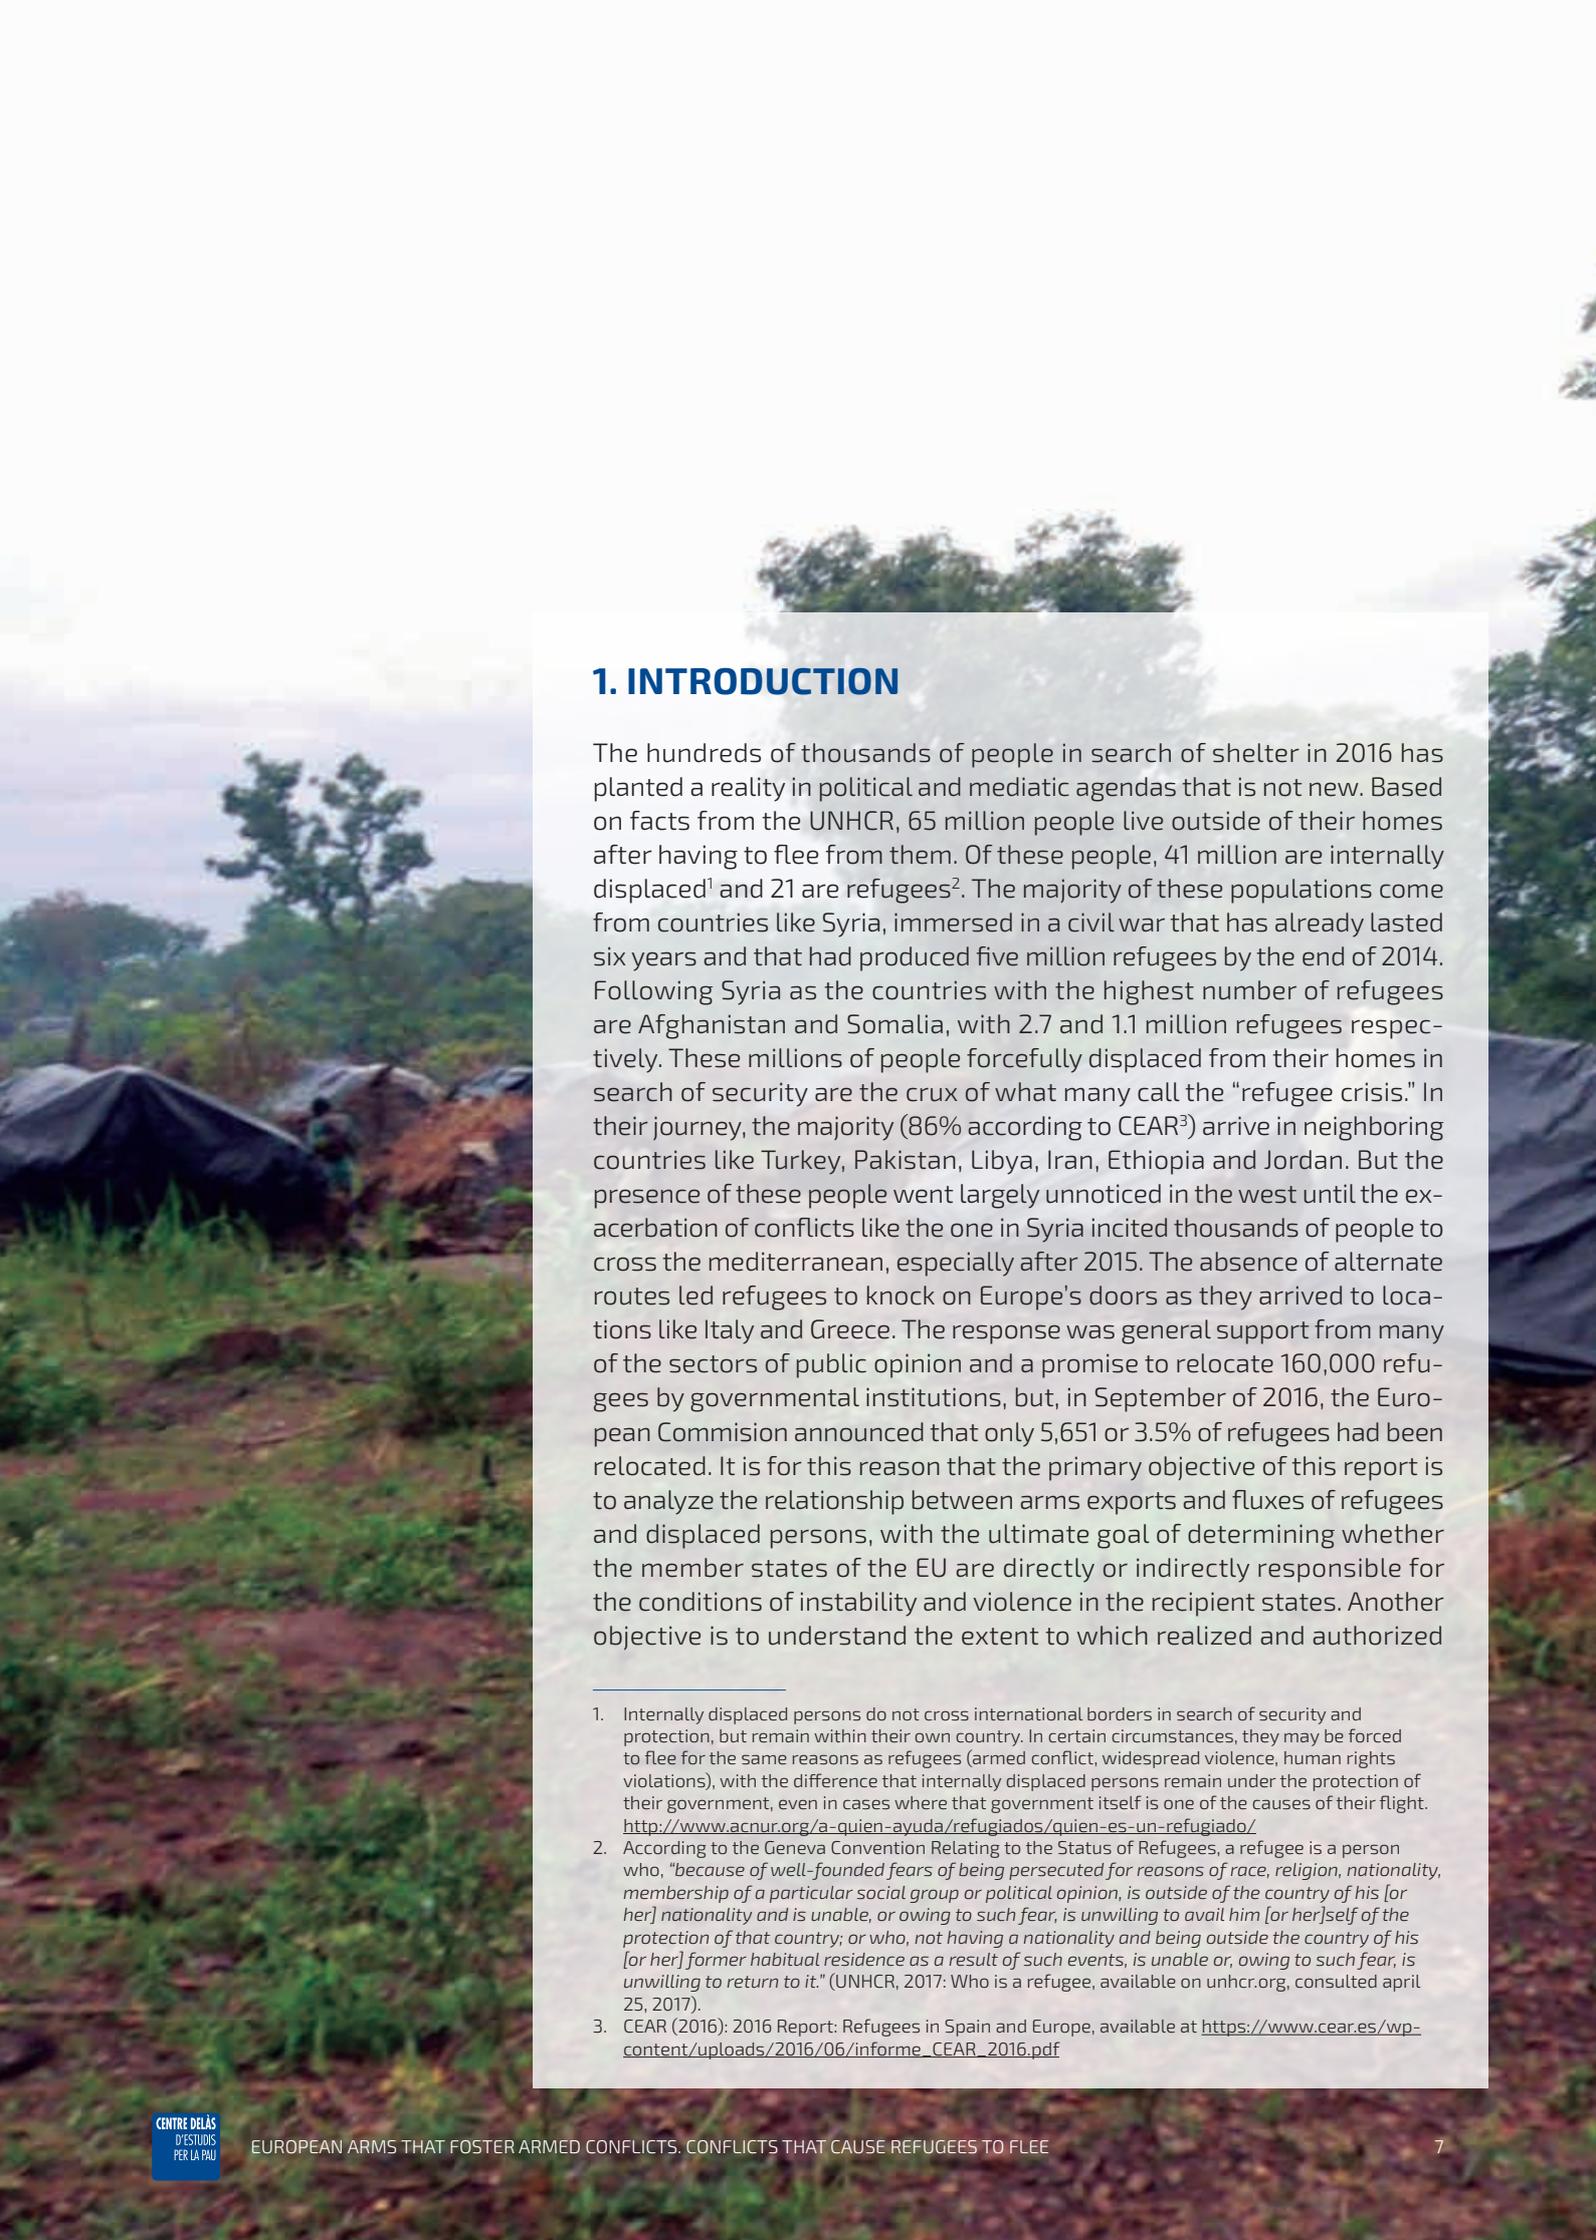

Arms to unstable countries

Almost a third of the main recipients of European armament worldwide are in situations of tension or conflict, so it is unsurprising to find that statistics show European arms exports ending up in countries at war or in situations of grave insecurity. **European arms exports have thus had the potential to worsen or perpetuate armed violence in these countries, preventing the lives of refugees or displaced persons from returning to normalcy.**

The EU holds a certain degree of direct or indirect liability in provoking the conditions that force civilian populations to flee from their homes because of its sale of armaments to places where security has worsened. **The existence of refugees and displaced persons in a certain country is a clear indicator that the stability in their country of origin is deficient, and this factor is one of the criteria by which a state should reject an authorization or export of arms.**

We can confirm that exporting member countries of the EU have decided to authorize export licenses or effectively transfer arms to countries with vulnerable civilian populations as indicated by their fluxes of immigrants and displaced persons.

Only by understanding the context of violence in which refugees and displaced persons live can we begin to comprehend their necessary decision to flee from their homes. As long as the conflicts in their home countries continue, they will have no alternative. These conflicts are in part perpetuated by the EU's sale of weapons to countries with unstable conditions like Syria or Yemen. This report attempts to explain that Europe's relationship with these conflict zones is not limited to "asylum" policies and does not begin when refugees arrive at member states' shores. It begins when institutions and companies decide to invest in the war business and will continue until we pursue policies that prohibit and penalize the arms trade.

1. INTRODUCTION

The hundreds of thousands of people in search of shelter in 2016 has planted a reality in political and mediatic agendas that is not new. Based on facts from the UNHCR, 65 million people live outside of their homes after having to flee from them. Of these people, 41 million are internally displaced¹ and 21 are refugees². The majority of these populations come from countries like Syria, immersed in a civil war that has already lasted six years and that had produced five million refugees by the end of 2014. Following Syria as the countries with the highest number of refugees are Afghanistan and Somalia, with 2.7 and 1.1 million refugees respectively. These millions of people forcefully displaced from their homes in search of security are the crux of what many call the "refugee crisis." In their journey, the majority (86% according to CEAR³) arrive in neighboring countries like Turkey, Pakistan, Libya, Iran, Ethiopia and Jordan. But the presence of these people went largely unnoticed in the west until the exacerbation of conflicts like the one in Syria incited thousands of people to cross the mediterranean, especially after 2015. The absence of alternate routes led refugees to knock on Europe's doors as they arrived to locations like Italy and Greece. The response was general support from many of the sectors of public opinion and a promise to relocate 160,000 refugees by governmental institutions, but, in September of 2016, the European Commission announced that only 5,651 or 3.5% of refugees had been relocated. It is for this reason that the primary objective of this report is to analyze the relationship between arms exports and fluxes of refugees and displaced persons, with the ultimate goal of determining whether the member states of the EU are directly or indirectly responsible for the conditions of instability and violence in the recipient states. Another objective is to understand the extent to which realized and authorized

1. Internally displaced persons do not cross international borders in search of security and protection, but remain within their own country. In certain circumstances, they may be forced to flee for the same reasons as refugees (armed conflict, widespread violence, human rights violations), with the difference that internally displaced persons remain under the protection of their government, even in cases where that government itself is one of the causes of their flight. <http://www.acnur.org/a-quien-ayuda/refugiados/quien-es-un-refugiado/>
2. According to the Geneva Convention Relating to the Status of Refugees, a refugee is a person who, "because of well-founded fears of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside of the country of his [or her] nationality and is unable, or owing to such fear, is unwilling to avail him [or her]self of the protection of that country; or who, not having a nationality and being outside the country of his [or her] former habitual residence as a result of such events, is unable or, owing to such fear, is unwilling to return to it." (UNHCR, 2017: Who is a refugee, available on unhcr.org, consulted april 25, 2017).
3. CEAR (2016): 2016 Report: Refugees in Spain and Europe, available at https://www.cear.es/wp-content/uploads/2016/06/informe_CEAR_2016.pdf

exports by the EU fall in line with the general parameters for arms exports outlined in the Common Position of the EU. This position establishes limits on arms exports by member states of the EU to countries that do not comply with a certain established criteria⁴. Every member state is subject to legislation regarding exports of defence material and material of dual use as defined by the Common Position of the EU 2008/944 /CFSP, "Exportations of Military Technology and Equipment." Through this they are obligated to incorporate the criteria to which we have referred into their own national legislation while fully respecting the guidelines of the EU. In this study we consider the existence of refugees and displaced persons as an unequivocal indicator of an instability in the location. In fact, UNHCR confirms that "many people are forced to flee from their homes to insecure destinations, urban zones, countries where access to shelter is restricted and to new, faraway places. Depending on the extremity of conditions and the amount of aid provided to the country, prolonged conflicts also sometimes result in permanent displacement."⁵ The United Nations elaborates on this idea, stating that "the parties involved in conflict often used forced displacements of large sections of their population to meet their military objectives, such as the practice of ethnic cleansing. At the global level, during a conflict there are twice as many internally displaced persons as refugees, while 90% of all refugees remain in their region of origin"⁶

Arms can end up aggravating violence from which displaced persons and refugees flee, worsening the circumstances in their home countries and impeding them from returning. The member states of the EU have access to this information and can use it to make decisions about whether or not to approve licenses or to export arms to these countries.

We therefore consider in this report that the authorization of export licenses for defense, dual use, or any material considered to be an arm to destinations that have significant populations of refugee and displaced persons to be controversial and requiring of a rigorous process of critical reflection at the state level before approval.

4. The exclusion criteria for arms exports from the Common Position are: 1) the existence of embargoes and sanctions; 2) violation of Human Rights and respect for International Humanitarian Law; 3) A security situation of tension or armed conflict; 4) The situation of regional stability and security; 5) The relationship with national security and allies; (6) The conduct of the country of destination in the International Community; 7) The risk of diversion and re-export; (8) The economic and technical capacity of the recipient country.

5. UNHCR (2012): Situation of refugees in the world, in search of solidarity. Available at http://www.acnur.es/PDF/sowr_resumen_20121213192819.pdf consulted May 18th, 2017.

6. United Nations (2017): United Nations and Humanitarian Aid, available at <http://www.un.org/es/humanitarian/overview/conflict.shtml>, consulted May 22nd 2017

On this note, it will be important in this investigation to check whether there have been sales of European armaments to any country in a state of insecurity that could lead people to become refugees or displaced, and whether these countries have been granted export licenses with a clear understanding of this state of instability.

In the first chapter, we will analyze flows of refugees and internally displaced persons with the aim of identifying the main countries of origin from which people flee based on conditions of insecurity, war, and violence. For this purpose, we have identified the countries in armed conflict or tension that are the principal generators of internally displaced people in the last year of our analysis, 2014. We have followed the parameters of the annual analysis of conflicts and peacebuilding of the Escola Cultura de Pau Of the Universitat Autònoma de Barcelona⁷ and determined that 89 countries have significant rates of refugees and displaced persons, 65 of which are in situations of conflict or tension.

We will proceed to identify EU arms exports and flows of refugees and internally displaced persons worldwide for the period 2003-2014, which corresponds to a period in which ample information exists on both European arms exports and refugees and displaced persons. This timeframe is also broad enough to draw conclusions from trends and policies with a certain permanence or constancy that are not subject to cyclical variations, giving us a total of 63 countries out of 65 in conflict or tension.

Secondly, we will draw connections between arms exports, population flows and the security situation of the importing country in an attempt to answer the following questions:

- Have arms been exported from EU member countries to places in conflict or tension where there are significant rates of refugees and internally displaced persons?

7. Escola Cultura de Pau considers armed conflict to be the confrontation of armed groups with incompatible objectives in which the use of violence causes a minimum of 100 fatalities in a year, among other qualitative impacts, with differentiated objectives of those of delinquency. It considers the situation in the dissatisfaction on the part of the population on high levels of political and social mobilization and / or a use of violence with an intensity that does not reach that of an armed conflict. Interpretation of the definition that can be found <http://escolapau.uab.es/contictosypaz/deniciones.php>

- Have these arms exports aggravated or perpetuated armed violence, generating new refugees or displaced persons or not allowing their lives to return to normal?
- Have EU member countries made the political decision to export arms to countries with clear indicators of insecurity and population movements through the authorization of export licenses or the effective realization of arms transfers?

The sources used for refugee and displaced data are provided by UNHCR, with corresponding figures at

the end of each year and excluding refugees and displaced persons in a similar situation. Data on arms exports has been collected from the annual reports on the European Union Code of Conduct on Arms Exports of the Official Journal of the European Union⁸ from the EU export browser ENAAT⁹.

8. 12 official reports have been used, which can be found at the European Union External Action Service website: https://eeas.europa.eu/headquarters/headquarters-homepage/427/disarmament-non-proliferation-and-arms-export-control_en

9. ENAAT is the European Network Against Arms Trade which provides a database on European arms exports. This report appears in the EU Member States' official reports: http://www.enaat.org/export/licence_en.html

2. RELATIONSHIP BETWEEN ARMED CONFLICTS AND REFUGEE/ DISPLACED POPULATIONS

One of the principal objectives of this report is to identify if the EU has exported arms responsibly by considering standards of security and living conditions. A first step will be to study the state of security of each country as a function of its population movements, referring to either internally displaced people or those forced outside of their country (refugees), along with analyzing the evolution of each country's indicators of conflict or tension that The Escola Cultura de Pau of the UAB annually publishes. This publication shows facts about refugees and displaced persons in each of the countries with a significant rates of these populations between 2003 and 2014, incorporating an indicator based on how the numbers of these populations change during the period of study. The goal here is to be able to discriminate between those countries whose security situations have improved, worsened or remained constant with regard to the number of people who, according to statistics of the UNHCR, have been forced to abandon their homes. It is a matter of showing that these countries are experiencing situations that have obligated a considerable number of people to seek protection and security in other places. We thus consider that persistently rising rates of refugees and displaced persons in the period of study is, in most cases, an indicator of instability and of sustained conflict in the region.

2.1 EVOLUTION OF REFUGEES AND DISPLACED PERSONS IN COUNTRIES IN CONFLICT OR TENSION

The knowledge of existing movements of populations within a country or flowing outside of a country is a factor that must be considered in making a responsible decision to ship arms to this destination. By also considering whether or not a country is in a state of conflict or tension, we arrive at a world map of the countries from which refugees flee in search of asylum and in which internally displaced people leave their homes in search of safety within their own country.

There exist 32 countries in armed conflict with an average of 7,547,600 refugees annually. Among those highlighted as the principal locations of ongoing wars are Afghanistan, Iraq, Syria, Sudan and South Sudan, Somalia, Colombia, the Democratic Republic of the Congo and the Central African Republic. Of all the countries listed as the most conflict-ridden during the period of study, ten have demonstrated increasing trends in their number of refugees, indicating that

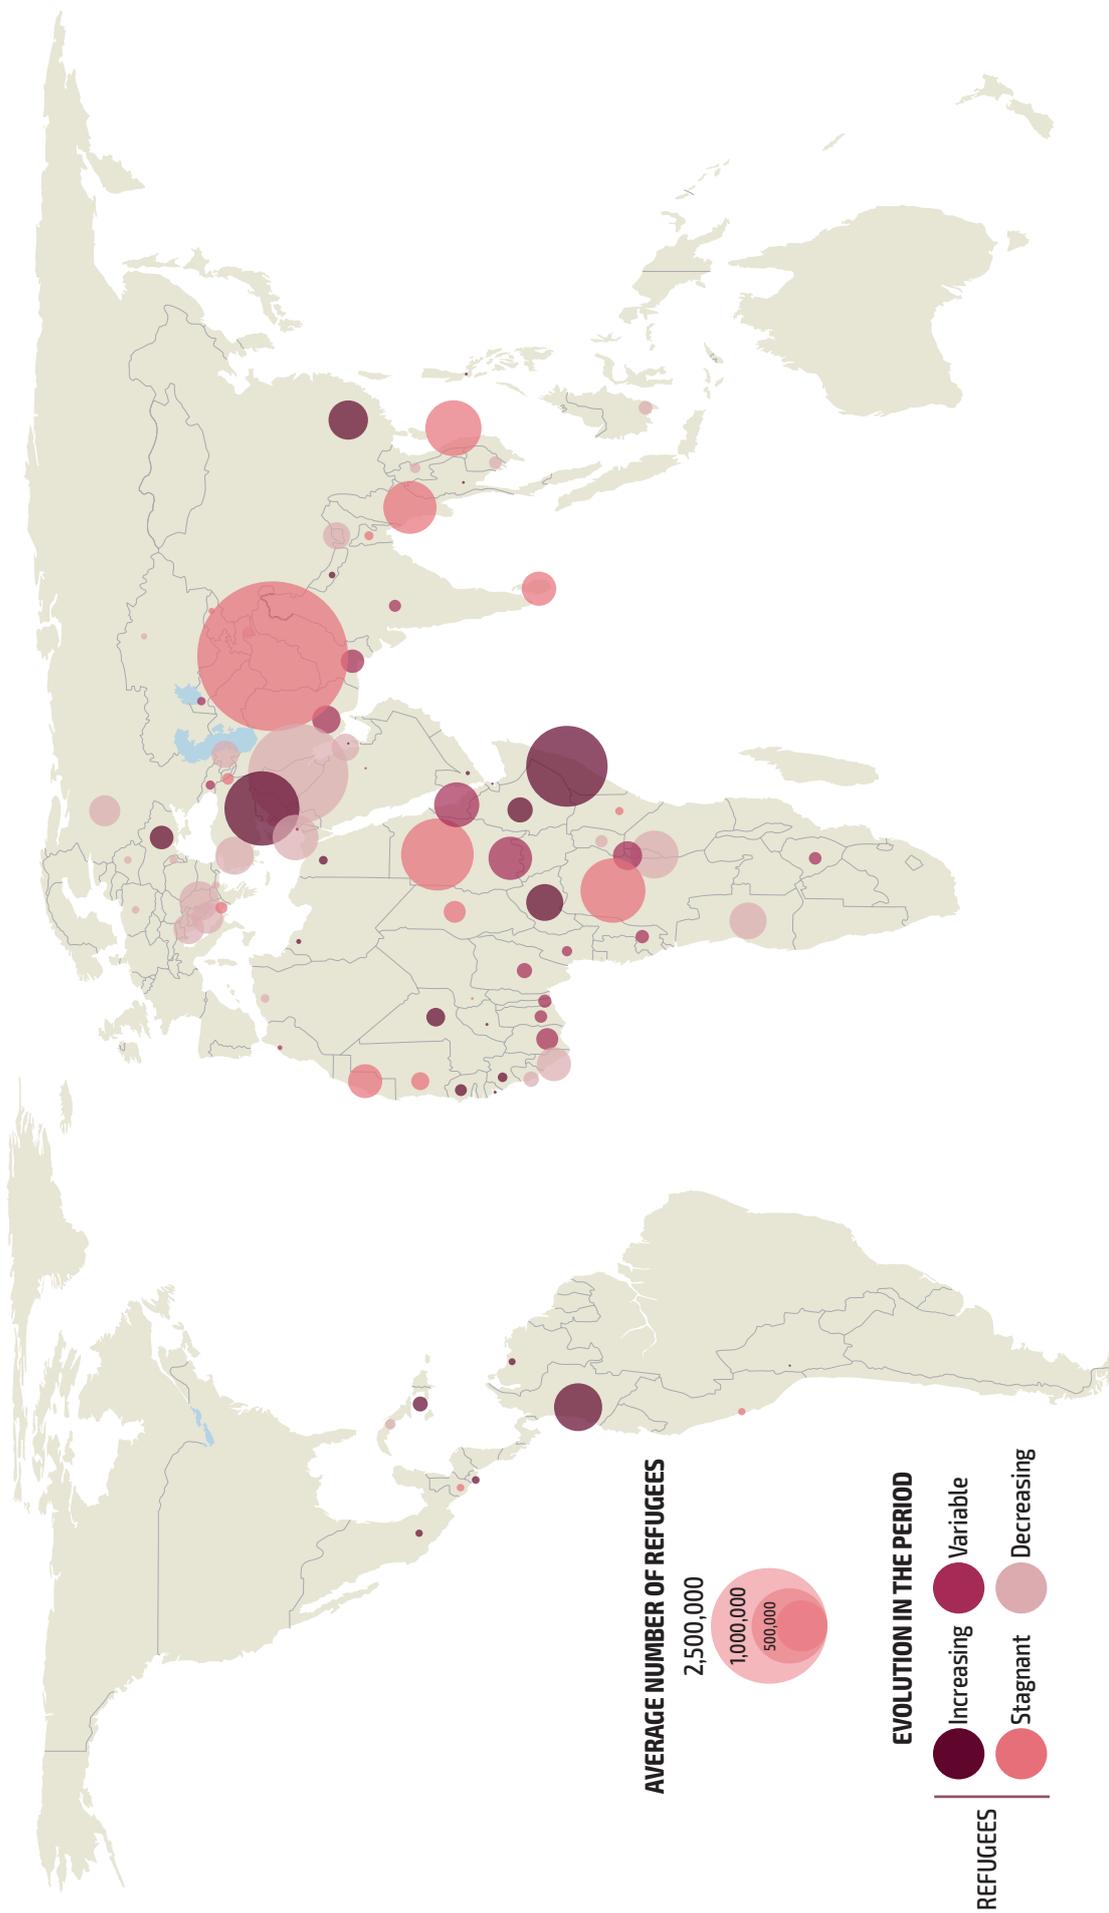

their conflicts may have worsened. This is the case in Somalia, Syria, Colombia, the Central African Republic, Ethiopia, Ukraine, Mali, Nepal, Libya and Yemen. As can be seen from map 1, another thirteen countries show constant or variable trends, with maintained flows of displaced populations seeking asylum.

It is important to keep in mind, however, that there are also countries that have been in conflict between 2003-2014 and have considerably reduced their volumes of refugees in other countries, like Iraq, Burundi, Turkey, Russia, Indonesia, Uganda, Libya, Algeria and Moldavia. Nevertheless, these places have still witnessed high rates of refugees during the period.

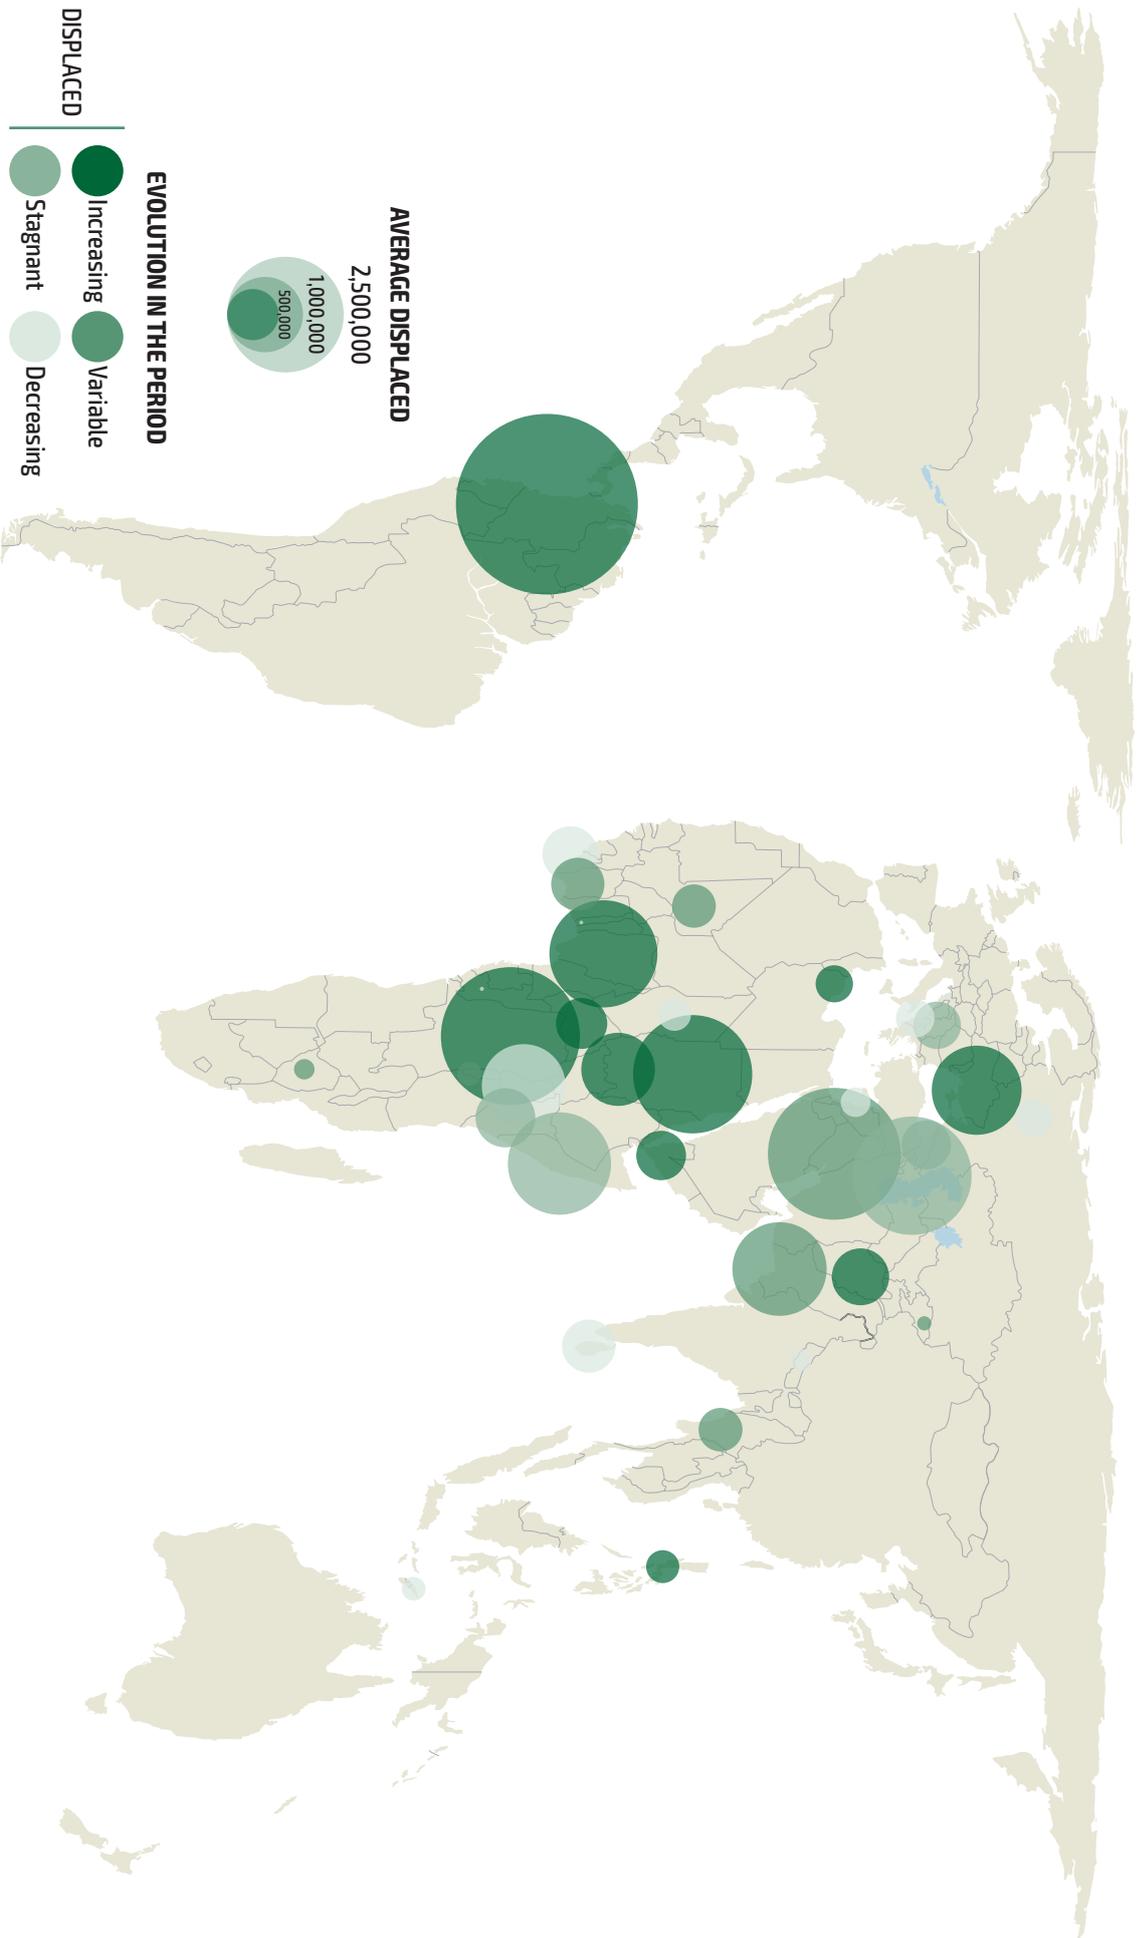

In regards to these countries that have been in situations of tension during the majority of the investigation period (IP), we can conclude that rates of refugees do not exceed the annual average of one million. This shows that armed conflict is the primary motivator for refugees or displaced persons to leave their homes. From this list, which you can find in annex 1, only four countries had an average of more than 100,000 refugees: Serbia, China, Angola, Bosnia and Herzegovina. Of these, only China has an upward trend. However, while just under 200,000 refugees is an undoubtedly high number (although per capita terms suggest a smaller amount), it is necessary to consider the countries with smaller numbers of refugees that have upward trends. This is the case for Haiti, Senegal, Guinea, Egypt and Venezuela, among others. It is also worth taking into account the cases of Rwanda, Mauritania, Georgia or Kenya, which have maintained relatively high volumes of refugees over time and demonstrate the difficulties of addressing the circumstances that generated tension or conflict in the first place.

Finally, it is integral to incorporate an analysis of the list of countries that have refugees but are not necessarily experiencing instability or security issues. First, it should be noted that on average there have been more than 1.7 million refugees from countries that have not been in any significant tension or conflict during the IP. These countries owe their high volume of refugees to previous situations of insecurity, which could be related to arms supplies that they had received from the EU in the period before 2003-2004. Among the countries with a significant number of refugees that has increased or remained constant with obvious variations from one year to another, Eritrea and Myanmar stand out. However we must also keep in mind Iran, the Republic of the Congo, Togo, Ghana, Armenia, Albania, El Salvador, Guatemala and Mexico for showing national rates of refugees that have not decreased.

MAP 1: EVOLUTION OF THE AVERAGE NUMBER OF REFUGEES ACCORDING TO THEIR COUNTRY'S SECURITY SITUATION BETWEEN 2003-2014

MAP 2: EVOLUTION OF THE AVERAGE NUMBER OF DISPLACED PERSONS ACCORDING TO THEIR COUNTRY'S SECURITY SITUATION BETWEEN 2003-2014

Source: Own preparation | Infograf: EsteveEsteve

To conclude this first part of the analysis of people that have necessarily left their homes for various reasons related to security, we must analyze the average numbers of internally displaced persons countries for which the UNHCR provides statistics. We will keep in mind whether the predominant security situation has been one of conflict, tension or neither. As a starting point, let us point out that between 2003 and 2014 there has been an annual average of almost 24 million (23,849,646) displaced persons in a total of 41 countries. The noteworthy countries are those with more than one million displaced people: Syria, Colombia, Iraq, DRC, Sudan, South Sudan, Pakistan, Nigeria and Somalia. Practically all of the countries in table 2 in conflict or tension maintain elevated numbers of displaced persons during the IP.

To conclude, in this part of the analysis we identify nearly 89 countries with relevant rates of refugees and 41 with relevant rates of internally displaced people between 2003 and 2014. Of these countries, 65 have maintained security situations of tension and/or conflict in the larger part of the twelve years of the study (32 being in conflict and 33 in tension). The other 25 are incorporated into the analysis for their having a minimum of 4-5 thousand refugees, 65% of whom come from countries in conflict and 8% from those in tension. The rest, despite 15% not having recurrent situations of conflict or tension, show volumes of refugees in a number that lead us

to consider that their living situation is not yet fully normalized.

On the other hand, all countries with internally displaced persons have been included in the study because this indicator is considered an anomaly resulting from an unresolved conflict that points to instability in the country in question. We can see that 87% of countries with internally displaced persons have been in conflict most of the time between 2003 and 2014 and 7% have been in tension. Only another 6% (nine countries) do not show trends of permanent tension or conflict but still have significant annual averages of displaced persons.

2.2 COUNTRIES WITH SIGNIFICANT SITUATIONS OF SECURITY, REFUGEES OR DISPLACED PERSONS

Next, we will make a selection of destinations with particularly remarkable scenarios regarding refugees, displaced persons and conflict or tension. As a result, countries in conflict with indicators of declining populations of refugees and displaced persons have been excluded (Algeria, India, Indonesia, Israel, Moldova and Thailand). We do include Russia and Turkey, as they are considered countries in conflict and still have high numbers of refugees and/or displaced persons, although the trend of these populations is declining.

TABLE 1: MAIN COUNTRIES WITH REFUGEES AND DISPLACED PERSONS ACCORDING TO SECURITY SITUATION

Country	Security Situation	Average Number of Refugees	Evolution in the period	Average Number of IDP	Evolution in the period	Average Number of Refugees + IDP 2003-14
Syrian Arab Republic	conflict	603,037	increasing	5,389,933	increasing	5,992,970
Colombia	conflict	249,551	increasing	3,372,023	increasing	3,621,574
Afghanistan	conflict	2,443,487	stagnant	334,960	increasing	2,778,447
Iraq	conflict	1,082,563	decreasing	1,797,790	variable	2,880,353
Dem. Rep. of the Congo	conflict	453,012	stagnant	1,969,578	increasing	2,422,590
Sudan	conflict	566,499	stagnant	1,446,323	increasing	2,012,821
Somalia	conflict	713,067	increasing	1,084,680	stagnant	1,797,747
Nigeria	conflict	25,020	variable	1,188,000	increasing	1,213,020
Pakistan	conflict	59,616	variable	905,243	variable	964,858
South Sudan	conflict	204,423	variable	551,775	increasing	756,198
Ukraine	conflict	60,762	increasing	823,000	increasing	883,762
Uganda	conflict	16,056	decreasing	712,817	decreasing	728,873
Azerbaijan	tension	81,879	decreasing	609,958	stagnant	691,837
Myanmar	-	305,234	increasing	196,722	variable	501,956
Sri Lanka	conflict	127,926	stagnant	292,531	decreasing	420,457
Central African Republic	conflict	143,421	increasing	268,922	increasing	412,343
Serbia	tension	170,197	decreasing	232,603	stagnant	402,800
Russian Federation	conflict	104,317	decreasing	151,607	decreasing	255,924
Kenya	tension	7,273	stagnant	363,000	stagnant	370,273
Ivory Coast	conflict	52,035	variable	289,135	variable	341,170
Burundi	conflict	250,668	decreasing	58,339	variable	309,007
Georgia	tension	9,227	variable	249,186	stagnant	258,413
Yemen, Rep.	conflict	1,940	increasing	252,663	increasing	254,603
Mali	conflict	38,144	increasing	194,167	variable	232,311
Eritrea	-	218,990	variable	-		218,990
Chad	conflict	49,037	stagnant	110,400	decreasing	159,437
China	tension	167,572	increasing	-		167,572
Turkey	conflict	157,728	decreasing	-		157,728
Lebanon	conflict	14,314	decreasing	90,000	decreasing	104,314
Libya	conflict	2,674	increasing	142,425	increasing	145,099
Kyrgyz Republic	tension	2,797	stagnant	21,133	variable	23,930
Philippines	conflict	866	variable	112,000	increasing	112,866
Rwanda	tension	91,441	variable	-		91,441
Nepal	conflict	4,754	increasing	50,000	decreasing	54,754
Timor-Leste	tension	76	decreasing	58,425	decreasing	58,501
Zimbabwe	-	17,285	variable	43,075	variable	60,360
Ethiopia	conflict	69,169	increasing	-		69,169
Mauritania	tension	35,365	stagnant	-		35,365
Haiti	tension	24,545	increasing	-		24,545
		8,625,967		23,362,412		31,988,379
		82%		94%		90%
Average Number of Refugees 2003-2014		10,493,887		24,942,168		35,436,055

Similarly, the table excludes countries in tension with downward shifts in their rates of refugees and those that, even with high averages of refugees (annexes 1 and 2), do not have displaced persons. We consider that a country that has had no internally displaced person during the 12-year period studied owes its statistics of refugees to past conflicts. The countries in tension that have been excluded for their clearly declining rates of refugees or for their lack of displaced persons are Angola, Bahrain, Bangladesh, Belarus, Bolivia, Cambodia, Cyprus, Equatorial Guinea, Laos and Tajikistan. The countries in tension that are included in the analysis, despite having smaller numbers of refugees, are those that show an upward trend and have generally stagnant situations of security between 2003–2013. The final detail can be observed in table 1 and in the table in annex 3 which lists the countries whose initial results called into question the relationship between refugees, displaced persons and the situation of conflict or tension that is explored in this chapter¹⁰.

The 39 selected countries are ranked from highest to lowest according to their sum of refugees and displaced persons and their security situation during the IP. While all deserve a critical analysis of the European arms exports received during this period, some are especially critical for their combination of all the factors that should be taken into account during the export authorization process. We are referring to those that are in situations of conflict and that offer growing or constant rates of refugees and internally displaced persons. The countries that meet this criteria are Syria, Colombia, Afghanistan, DRC, Sudan, Somalia, Ukraine, CAR, Yemen and Libya.

Those countries that have sustained situations of conflict or tension and have also shown constant, growing, or variable trends in their quantities of refugees or displaced persons make up another relevant group. The states with these characteristics are Nigeria, South Sudan, Myanmar, Mali and the Philippines. The analysis must include a third group of those countries that show indicators of conflict or tension prevailing in the period and that have varying and/or decreasing changes in their numbers of refugees and displaced persons. This is the case in Iraq, Pakistan, Kenya, Côte d'Ivoire and Burundi.

10. This criteria leads us to exclude the list of deeply entrenched conflicts in the Western Sahara and Palestine, because in both cases the destinations do not import European arms more than marginally.

We will also examine countries that experienced generally constant scenarios of conflict and tension, but whose number of people forced to leave their homes has not shown clear trends or fluctuations during the period. The evolution of these countries' security situations during the period of analysis are thus variable and interpretable. We refer in this case to Georgia, Eritrea, Kyrgyzstan, Rwanda, Zimbabwe, Ethiopia, Mauritania, Haiti and Venezuela. Finally, there are countries that, despite having experienced scenarios of conflict or tension during the majority of the period of investigation, have reduced or unchanged internal and external population flows. These countries include Uganda, Azerbaijan, Sri Lanka, Serbia, Russia, Chad, Turkey, Lebanon and East Timor.

2.3 EUROPEAN ARMS EXPORTED TO COUNTRIES IN CONFLICT OR TENSION

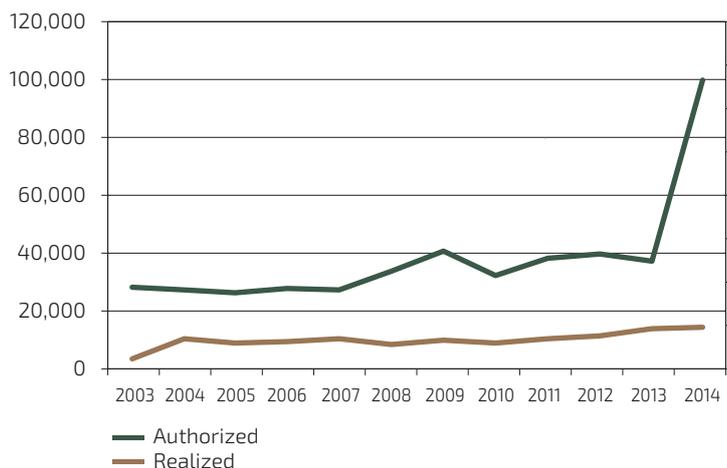

In this section we will use the information available in the annual reports on the European Union's Code of Conduct on Arms Exports of the Official Journal of the European Union to assess the volume of European arms exports and to identify the main exporters and recipients of these arms. From this point on, we will examine the value of both the realized and authorized exports (those arms exports effectively carried out and the transfers that have yet to happen but have approved licenses) because while the EU provides in depth information about their authorized exports, existing data on realized exports is scarce and practically absent for some of the largest exporter member countries in the EU. For example, the United Kingdom has not reported its realized exports since 2002 and Germany has not done so since 2007.

In any case, we will continue with our analysis that aims to identify the main trends in the sale and type of arms exported from Europe while remaining conscious of the divergences that exist between data from national reports and data from the joint report of the EU.

The arms exports that have information available from the member states of the EU for the period of 2003–2014 have reached a total of 453.167.283.624 € in authorized licenses, and 119.018.062.448 € in realized exports¹¹. The average percentage of authorized exports that have been effectively carried out during the period is 26%.

11. The data used is available in the annual reports on arms exports of the EU.

Graph 1: The Value of Authorized and Realized EU Arms Exports 2003-2014

Source:

Table 2: EU arms exports to countries in conflict or tension 2003-2014

	Authorized	Realized
Exportations to Countries in Conflict	64,849,041,932 €	20,855,172,728 €
% conflicto	15%	18%
Exportations to Countries in Tension	57,632,907,565 €	16,426,288,320 €
% tension	13%	14%
Total conflict+tension	122,481,949,497 €	37,281,461,048 €
% conflict+tension	29%	31%
Total exportations	453,167,283,624 €	119,018,062,448 €

Source: Own preparation

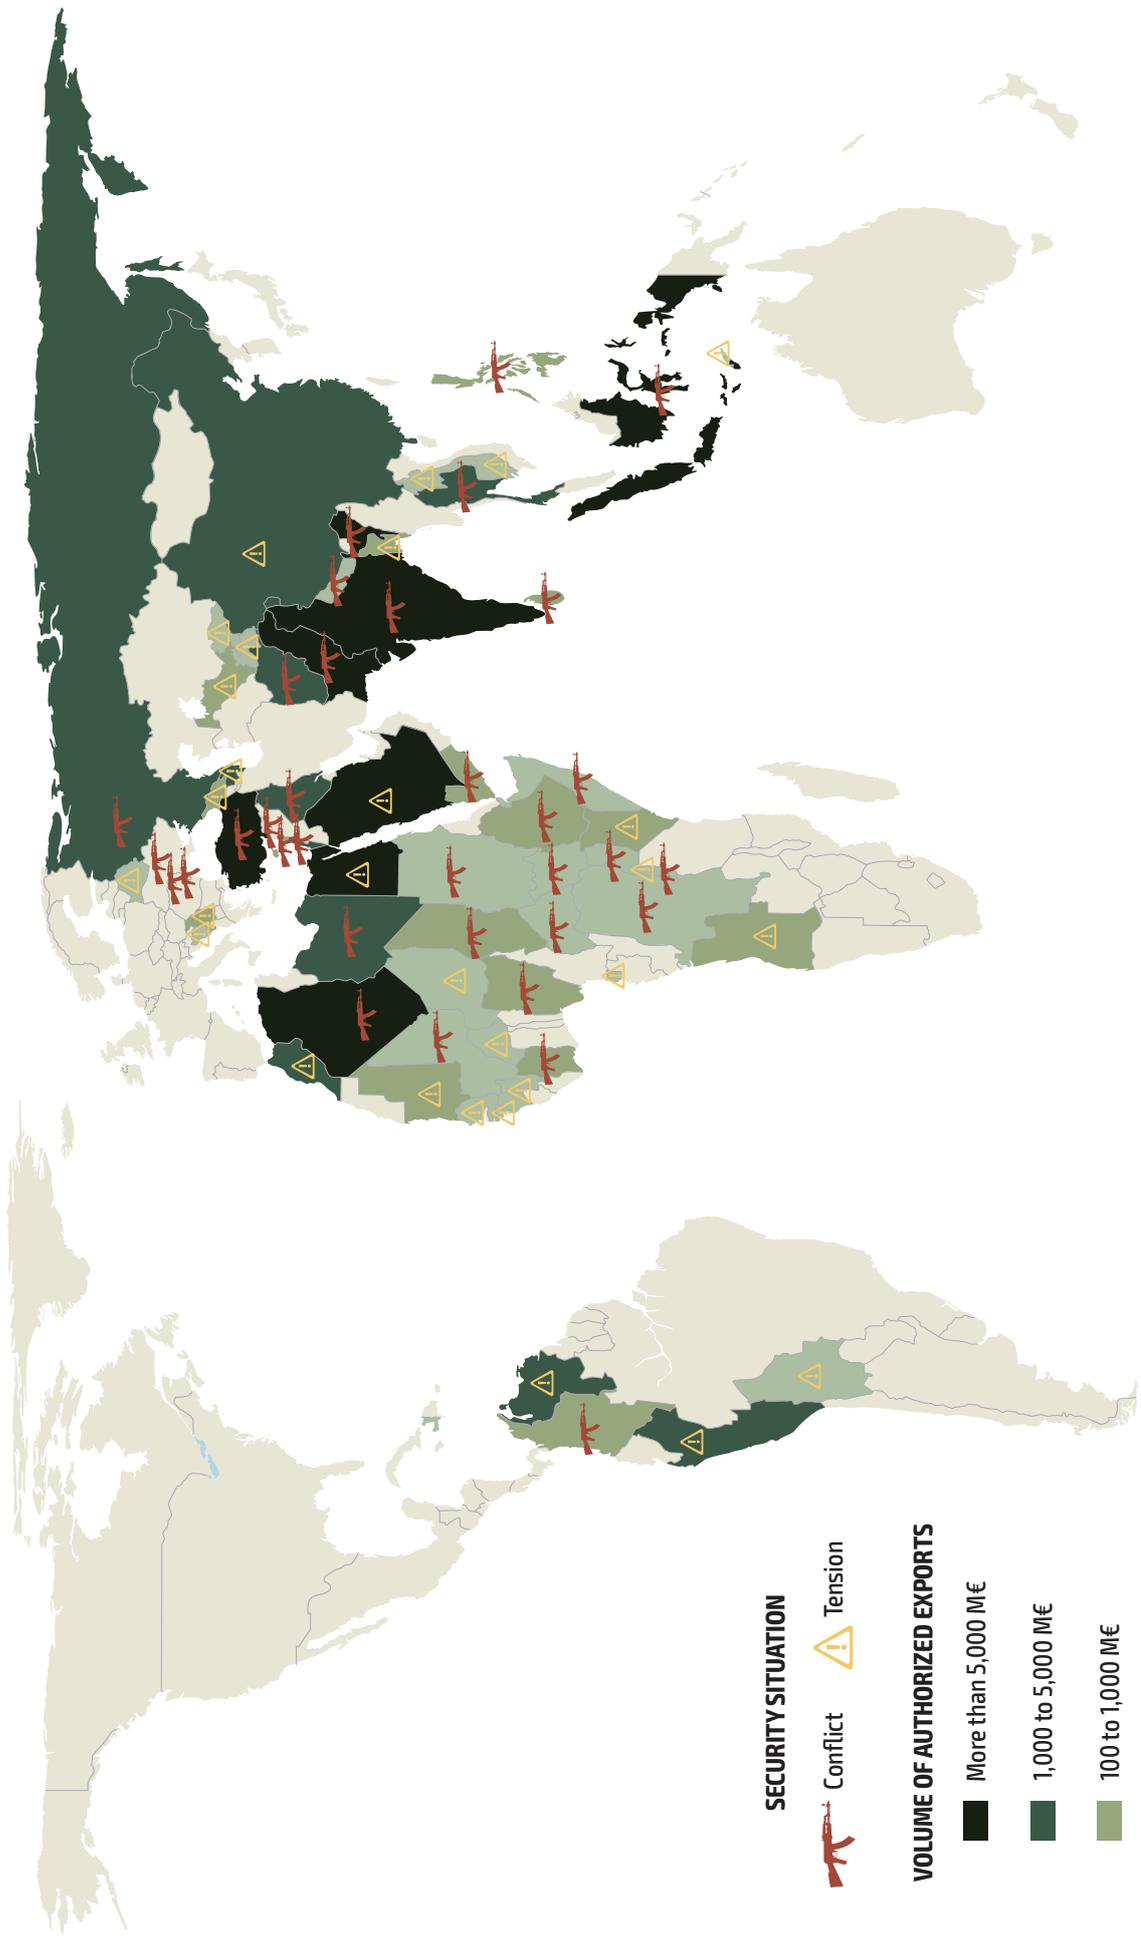

Of the total value of European exports authorized between 2003 and 2014, 29% or 122.481 million € was destined for countries in situations of conflict or tension during the entire period. The value of realized exports during the IP was at least 37.281 million euros, which is equivalent to 31% of total exports. A more detailed analysis reveals that more arms have been exported to countries in conflict than to countries in tension, but the difference is minimal. 15% of authorized exports and 18% of realized exports of the total sale of European arms have been destined for countries in armed conflict, while 13% of authorizations and 14% of realized exports have been sent to places in security situations of tension.

This highlights the consistent sale of armaments to places that have been in armed conflict or tension during all the years of the analysis period or have

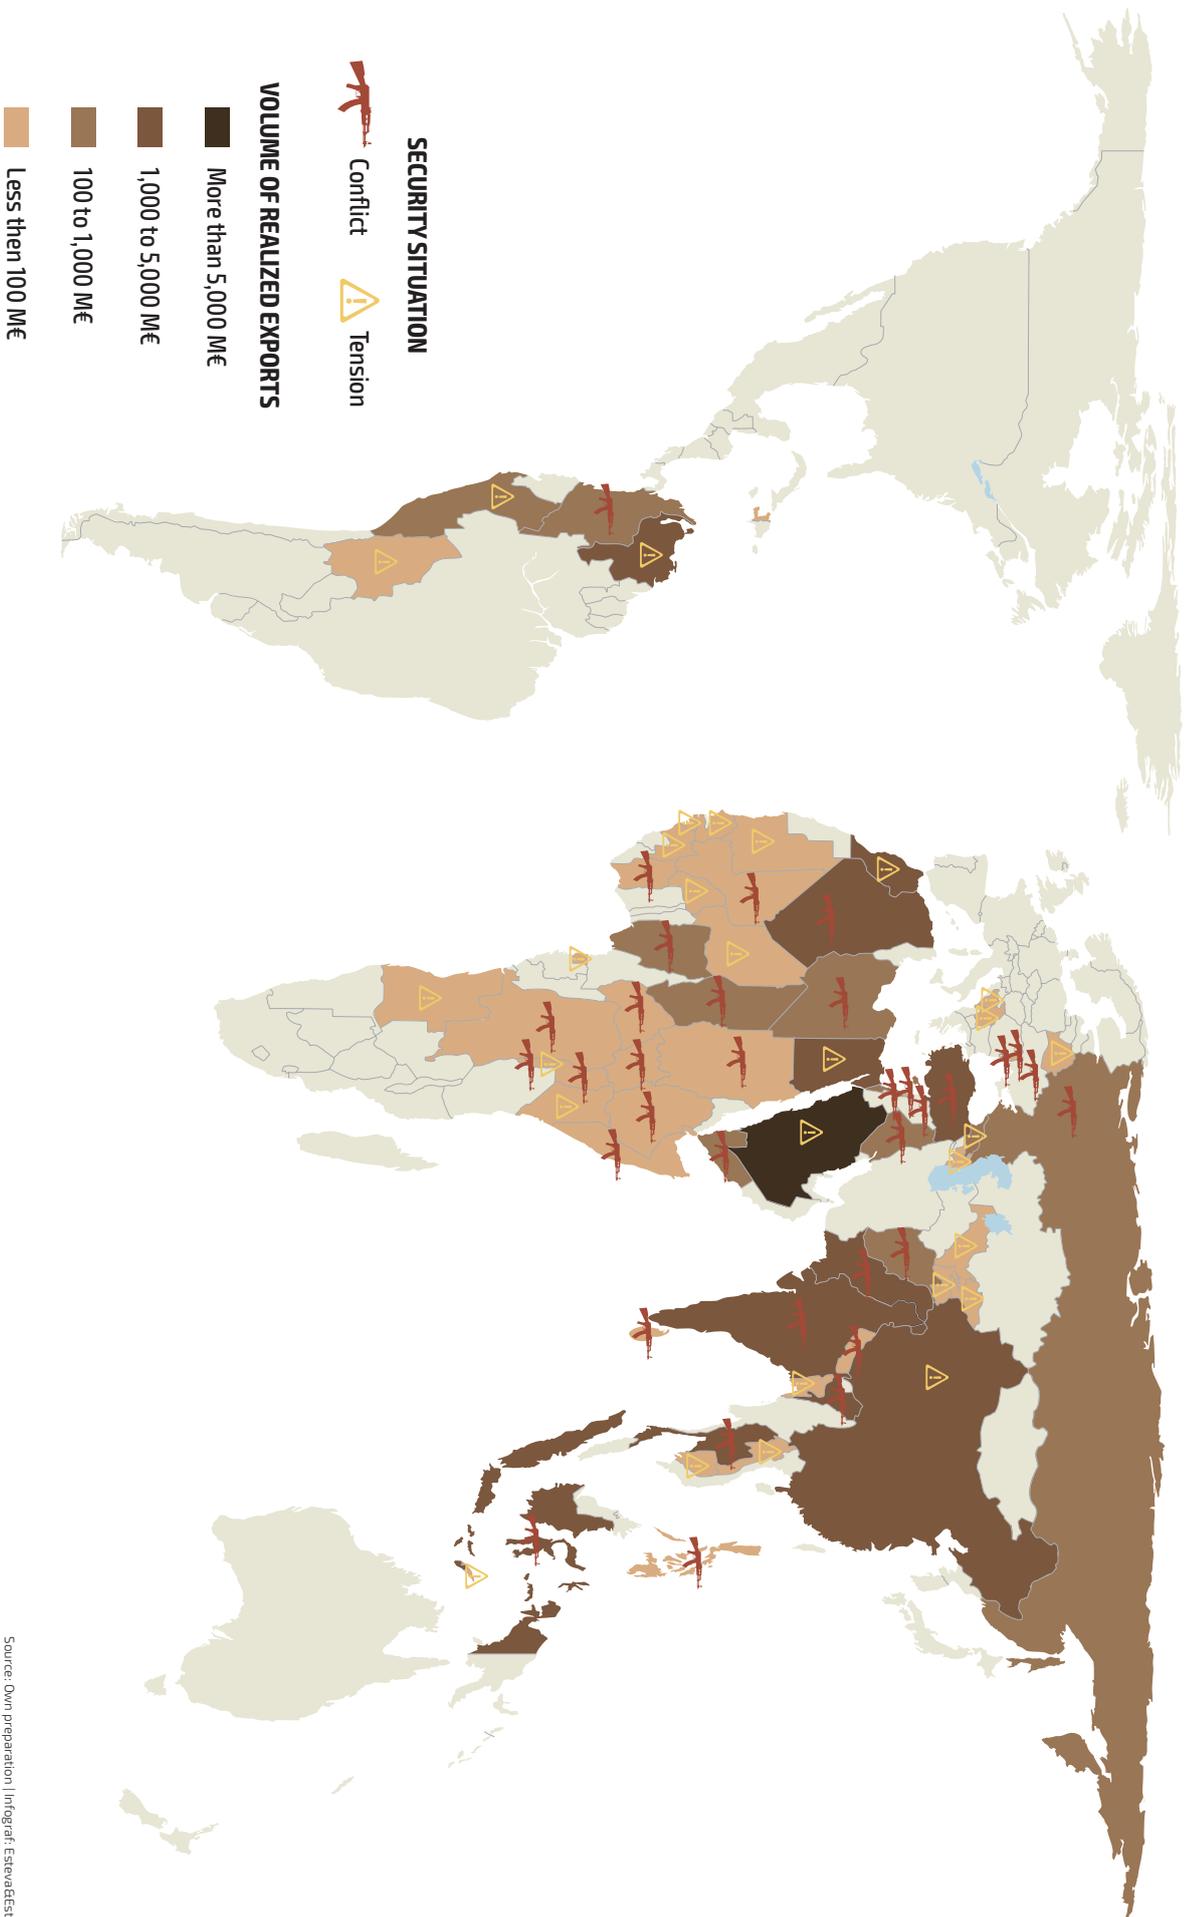

reached a state of conflict by 2014 over several years. The following 30 countries meet this criteria: India, Turkey, Pakistan, Algeria, Indonesia, Israel, Russia, Thailand, Iraq, Afghanistan, Libya, Nigeria, Colombia, the Philippines, Yemen, Lebanon, Ethiopia, Chad, Sri Lanka, Mali, Ivory Coast, Uganda, Democratic Republic of the Congo, Sudan, Burundi, Moldova, Somalia, Central African Republic, Nepal, South Sudan, and for some years even Iran and Syria.

Thirty countries have received weapons from some EU member state at a time when they could have been used in armed conflict. In no case has importing armaments made the situation of conflict totally disappear, and only in 8 cases of the 30 (Israel, Indonesia, Lebanon, Chad, Sri Lanka, Ivory Coast, Uganda and Nepal) have arms imports eased the situation of conflict to one of tension..

**MAP 3: DESTINATIONS OF AUTHORIZED EXPORTS
BY MEMBER STATES OF THE EU IN CONFLICT OR TENSION BETWEEN 2003-2014**

MAP 4: DESTINATIONS OF REALIZED EXPORTS BY MEMBER STATES OF THE EU IN CONFLICT OR TENSION BETWEEN 2003-2014

Source: Own preparation | Infograf: EsteveEsteve

In certain countries with tension that were not considered to be in armed conflict, importation of weapons has persisted despite the worsening security situation of the country. These instances include Turkey, Pakistan, Yemen, Ethiopia, Mali, Syria, Burundi, Central African Republic and South Sudan. Libya, too, continued to sell armaments in its war-like years, and since the outbreak of Ukraine's civil war, their importation of European arms has multiplied by five times.

On a second controversial note, we find that destinations like Saudi Arabia, Egypt, Morocco, China, Azerbaijan, Venezuela, Peru, Georgia, Bahrain, Cyprus, Angola, Uzbekistan, Serbia, Bangladesh, Kenya, Mauritania, Burkina Faso, Senegal, Djibouti, Guinea Equatorial Guinea, Bosnia and Herzegovina, Bolivia,

Niger, Cambodia, Rwanda, Tajikistan, Kyrgyzstan, Belarus, Guinea, Haiti, East Timor, Lao and Guinea Bissau have consistently imported arms despite knowledge of permanent situations of tension in the countries, which has sometimes exacerbated the tension or conflict, as in the case of two of the major importers of European armaments: Saudi Arabia and Egypt.

On the other hand, Ecuador, Turkmenistan and Cameroon are opposite cases. As their importation of armaments has continued, the tension in these countries has continued to improve over the last years of the analysis. It should also be mentioned that the EU has not authorized arms sales to North Korea, Myanmar, Fiji and Zimbabwe, nor has it authorized sales to Tajikistan, Belarus and Eritrea during the last year of this study.

3. EUROPEAN ARMS THAT FOSTER CONFLICTS WHICH GENERATE REFUGEES AND DISPLACED PERSONS

The sale of arms to each of the identified countries may have had divergent effects on the evolution of their states of conflict, which, according to our research approach, is one of the main reasons that people flee from their homes in search of safer areas. We will analyze the relationship between arms exports to these countries and the evolution of their security situation based on the following three indicators: the country's situation of conflict/tension, its rates of refugees/internally displaced persons and the value of arms it imports. We also aim to determine whether the EU should be held accountable for their decisions on the authorization/exportation of arms to places with clearly unstable conditions.

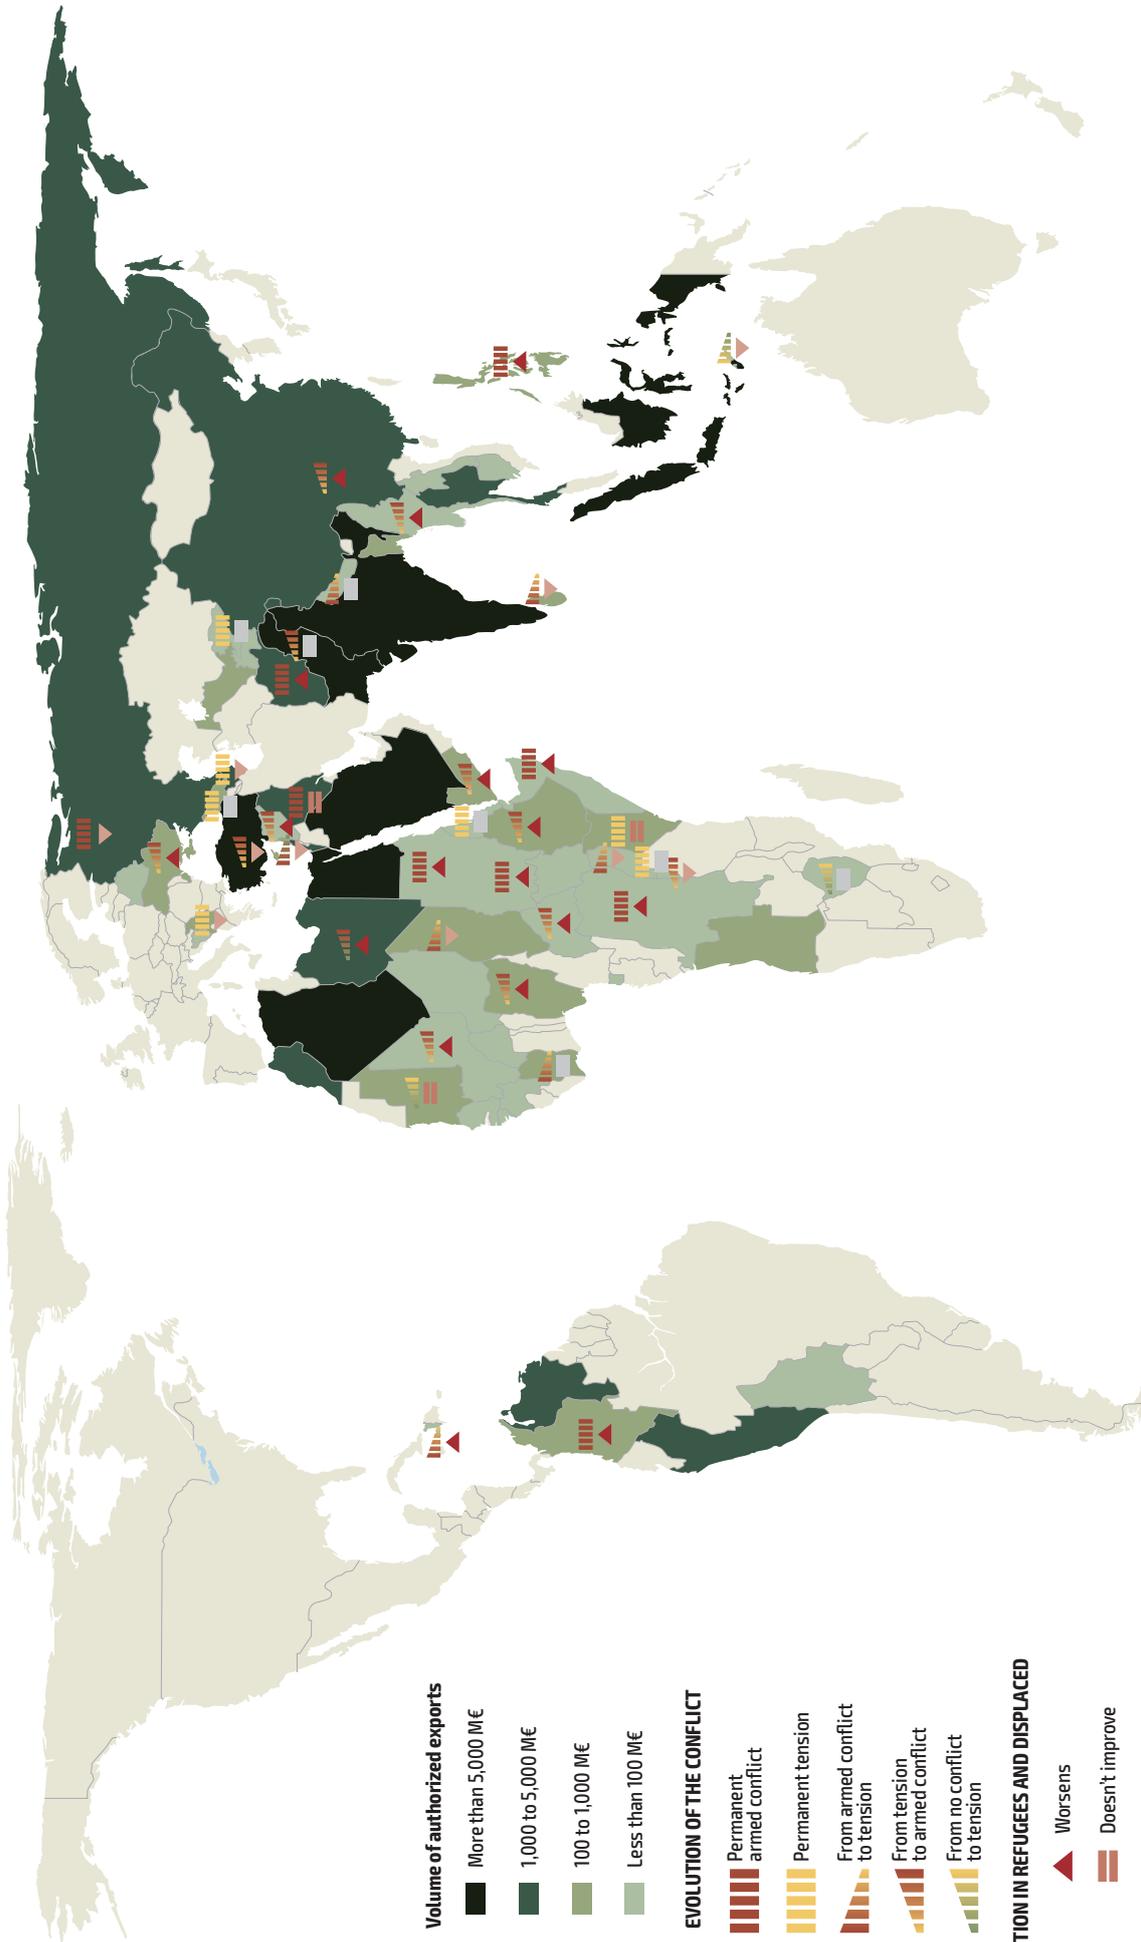

In this section, we will focus on analyzing the 39 specifically identified countries that, because of their characteristics in terms of the aforementioned indicators, make them especially relevant in determining whether imports of European arms have worsened their situation of security. Finally, we will focus on the 26 major European arms importers with significant indicators of conflict and flows of refugees/displaced persons while identifying the EU Member States that export the greatest values of arms to these destinations.

3.1 PARTICULARLY CONTROVERSIAL ARMS IMPORTERS BASED ON THEIR SITUATIONS OF INSTABILITY

As a first step in this phase of the analysis, we selected the forty states that collectively generate 82% of global refugees and 94% of internally displaced persons. Regarding the value of European exports destined for some of these countries, we will refer to 8.1% of authorizations and 9.2% of realized exports (recalling the lack of information provided by both the United Kingdom and by Germany on this matter). In any case, we can conclude that in the period 2003-2014, at least 36,714 million euros of European armaments were authorized and 10,902 million euros were exported to forty destinations where the security situation and its population flows indicated that these arms could be used in ongoing conflict.

As for the evolution of the conflict, 16 of the mentioned countries have experienced worsening situations of security (advancing from "no conflict" to "tension" or from "tension" to "armed conflict"). In another 16, the security situation has not improved despite consistent importations of arms. Finally, in eight of the destinations, the security situation did improve. Below we can see which of these countries received the highest values of European armament.

MAP 5: DESTINATIONS OF EUROPEAN ARMS EXPORTS AND THE EVOLUTION OF ARMED CONFLICTS AND POPULATIONS OF REFUGEES/DISPLACED PERSONS.

As we can see from the forty significant countries in terms negative evolutions of their security situation, 11 of them (Nigeria, Pakistan, Yemen, Mali, China, Turkey, Libya, Ethiopia, Venezuela, Ukraine And Mauritania) have received large amounts of European armament of great economic value and all have suffered from escalating violence. Another group of countries (Myanmar, RCA, Burundi and Zimbabwe) has also experienced worsening situations of security and has received European armaments, but in relatively small amounts. However, the scale of the sale of arms to these countries should not be overlooked because every recipient has a complex political situation in terms of internal democracy, and the type of weaponry that they import is generally low cost.

Nine countries have been major importers of European armaments and their situation has remained in a general state conflict. This is the case for Colombia, Afghanistan, Iraq, Azerbaijan, Serbia, Russia, Kenya, Georgia and the Philippines.

Other destinations with relatively low values of imports (between 20 million and 100 million €), that should still be considered based on the type of weaponry they import, the degree of deterioration or perpetuation of their conflicts, and their high numbers of refugees and displaced peoples are Syria, DRC and Sudan.

Sudan and South Sudan appear to be especially sensitive destinations despite their officially low volumes of imported armament. These two countries combine situations of unimproved armed conflict with very high numbers of refugees and displaced people that continue to grow. Uganda, Sri Lanka, Lebanon, Nepal, East Timor and Haiti, on the other hand, all have clearly decreasing trends of refugees and improving situations of conflict despite their significant importation of European arms. Their volumes of arms import are

not homogenous, and while imports are practically nonexistent in the first three cases (principally in Lebanon, but also in Sri Lanka and Uganda), the value of European arms exports to the other countries is significant. In any case, it appears that at this level of analysis arms imports do not negatively affect the security of these countries.

It is worth including a series of cases that do generate suspicion about the relationship between conflict evolution, rates of refugees/displaced peoples and arms exportations. For example, the figures of arms imports in Côte d'Ivoire and Chad are not lower, but their security situation continues to improve while their volumes of refugees and displaced persons have varying trends. It should be noted that in Côte d'Ivoire the average number of refugees and displaced persons is very high (341,000) and Chad has an insignificant number. Eritrea and Kyrgyzstan, where the situation of conflict has not improved, the numbers of refugees and displaced persons are constant in Eritrea and variable in Kyrgyz, but do not indicate any downward trend and exports of European armaments are low.

3.2 EUROPEAN ARMS TO PLACES IN CONFLICT WITH SIGNIFICANT VOLUMES OF REFUGEES AND DISPLACED PERSONS AND CONTINUALLY WORSENING SITUATIONS OF SECURITY

In this more exhaustive analysis of European arms exports to particularly controversial places, we will focus exclusively on destinations where the security situation has worsened while the number of refugees and displaced persons has not declined. 26 countries meet this criteria. In total these countries have received € 9.3 billion in arms (with € 33.6 billion in authorizations) and have accumulated millions of refugees and 27 million internally displaced persons on average in the IP.

Table 3: Refugees, displaced persons and exports to countries in conflict or tension

Average number of refugees in countries that import European arms	7,106,507
Average number of displaced persons in countries that import European arms	20,101,516
Authorized exports to countries in conflict or tension	33,611,695,362 €
Realized exports to countries in conflict or tension	9,326,186,891 €

Source: own preparation

In Table 4, we have selected 26 of the main destinations of European armament with significant flows of refugees and displaced persons. The impact of arms imports is clearly negative as shown by the aggravation or perpetuation of conflict in the regions. These 26 countries account for 7.4% of authorized exports and 7.8% of exports. This means 33,611 million € in authorizations and 9,326 million in realized exports. In other words, between 7.4 and 7.8% of European armaments exports have been destined for places in worsening situations of armed conflicts or tension, and to places with vulnerable civilian populations demonstrated by their significant rates of

refugees and displaced persons. **These 26 destinations for European arms exports have generated 75% of the average refugee and displaced persons of the period, which translates to 27 million people that have been forced from their homes in an effort to flee the armed violence in their country.** Of these, only Russia, Turkey and Zimbabwe do not show significant increases in their population flows as a result of insecurity. The rest show either increasing or variable trends in their rates of refugees and displaced persons and always maintain large numbers of people forced to live outside their places of origin.

Table 4: Especially controversial importers of European arms 2003-14

Country	Average Refugees + Displaced 2003-14		Authorized Exports	Realized Exports 2003-14	Value of arms Exports	Evolution of conflict

Source: own preparation

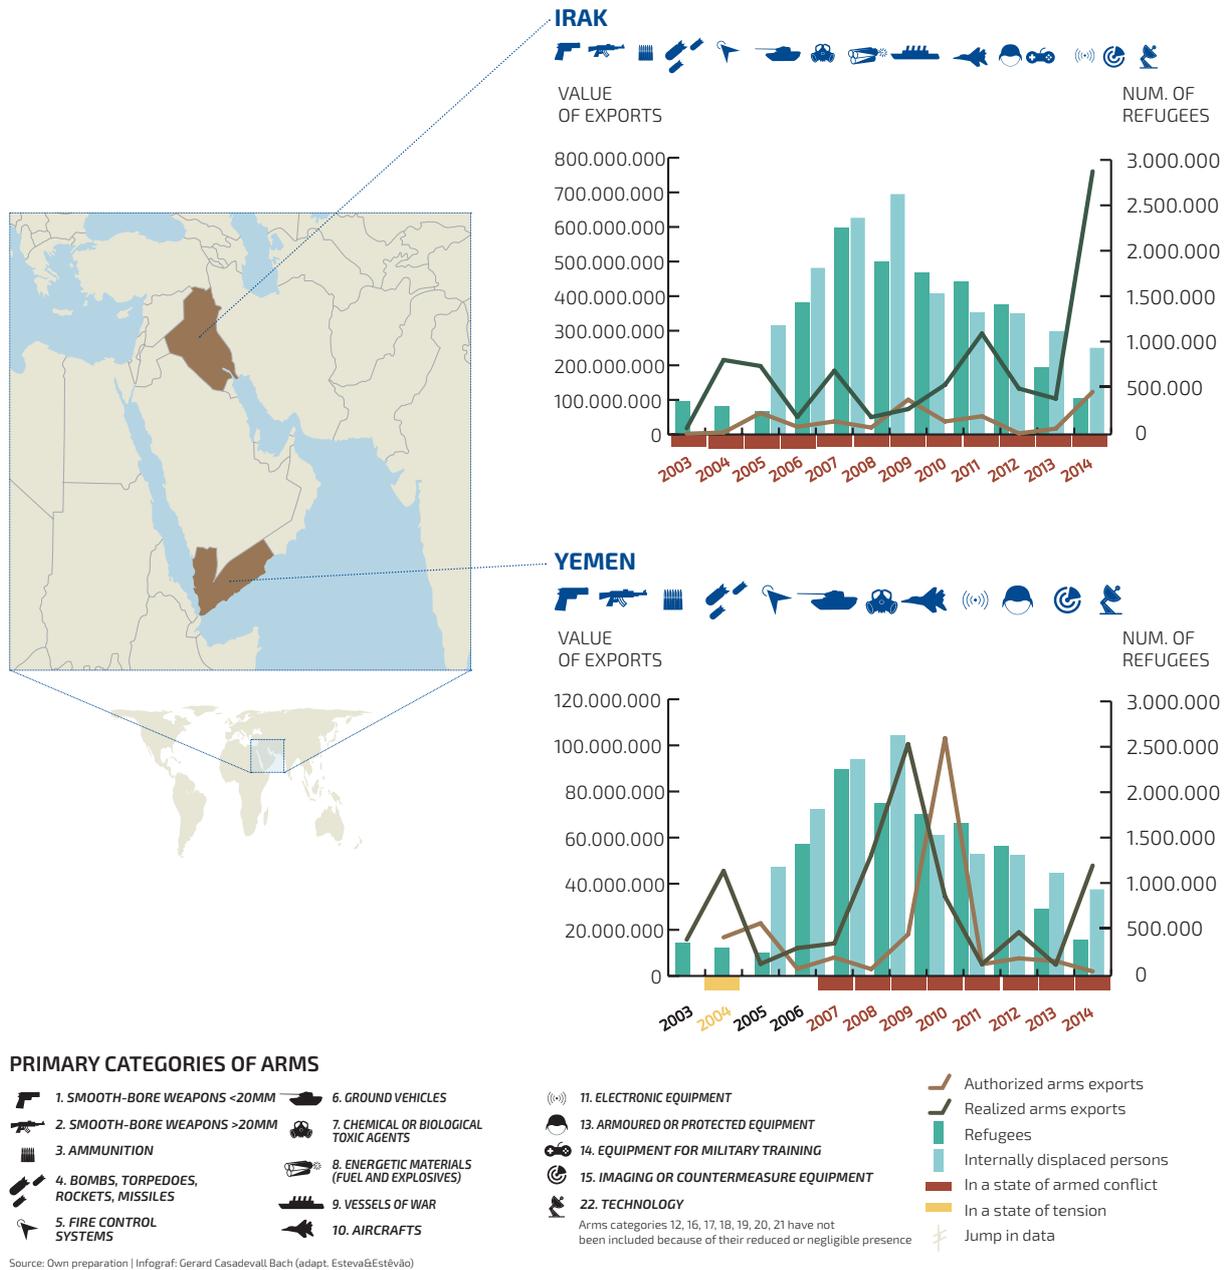

In the following analysis of the data in table 6, we have selected recipients of European armaments from 2003 to 2014 based on the existence of conflict/tension and refugees/displaced persons in the regions. We identify that arms have been sold habitually from Europe to 26 countries of the Middle East,

Sub Saharan Africa, North Africa, Sahel, Central and Pacific Asia and Latin America in significant volumes, all having been in conflict and having experienced worsening security during the period. A more detailed analysis is provided below.

Middle East: European weapons fuel the high level of conflict in the region

Figure 2: Evolution of refugee/displaced populations and arms exports in Irak and Yemen 2003-2014

Of the 26 especially controversial recipients of arms based on their populations of refugees or internally displaced people, 3 of them (Syria, Iraq and Yemen) are situated in the middle east which is a region with an especially high level of conflict. This region is made up of 14 countries: Bahrain, Egypt, Iran, Israel, Lebanon, Kuwait, Syria, Qatar, Yemen, Saudi Arabia, Jordan, Oman, United Arab Emirates and Iraq, five of which are in permanent conflict (Syria, Iraq, Yemen, Israel and Lebanon) and three of which are in tension (Egypt, Saudi Arabia and Bahrain). In other words, of the 14

countries that make up the region, more than half are in states of conflict or tension.

This gives us an idea of the gravity of the security situation in the Middle East, where there exists an average of 1,801,005 refugees and 7,530,389 displaced persons. This represents 17% and 31% of the world's average refugees and displaced persons respectively during the period, even without including the 225,698 Palestinian refugees from the region.

Given the context of violence and conflict present throughout Middle East, it is obvious that selling arms to any of its countries can have serious consequences on security. The Middle East is also home to the conflicts that have generated the highest figures of refugees and displaced persons in the world, and the security situation has worsened here rather than improved. Nevertheless, some of these countries are among the main buyers EU arms. At the top of the list is Saudi Arabia, with a total of 9.466 million € in authorized and realized exports, followed closely by Egypt with a value of 1.412 million € and then Israel and Iraq with 633 million € and 484 million € respectively. Other noteworthy locations are Bahrain, Yemen and Lebanon.

Fighting in Yemen began in 2004. Between 2004-2005, we noted that arms exports were 16,745,428 euros the first year and 22,833,954 euros the second. Warships and aircrafts from France were the one of the categories of exports. Despite a ceasefire in February 2010, the situation in the area remained volatile and we can see an increase in exports by 103,123,565 euros with Bulgaria (89,117,990 euros) and Czech Republic (12,524,982 euros) taking the lead in exports of ammunition, small arms, light weapons, explosive devices, military vehicles and tanks. While it is true that exports have declined in the last years of the conflict, continuing to export arms to a country where all parties in the armed conflict commit recurrent violations of international law calls accountability into question. Such violations include the bombing of hospitals and other infrastructure resulting in numerous civilian casualties.

Conflict in Yemen has worsened over the IP, and particularly during the surge in 2014. Yemen has increased numbers of refugees and far greater rates of internally displaced persons. The sale of arms to this country totals 552 million €, and the years 2009

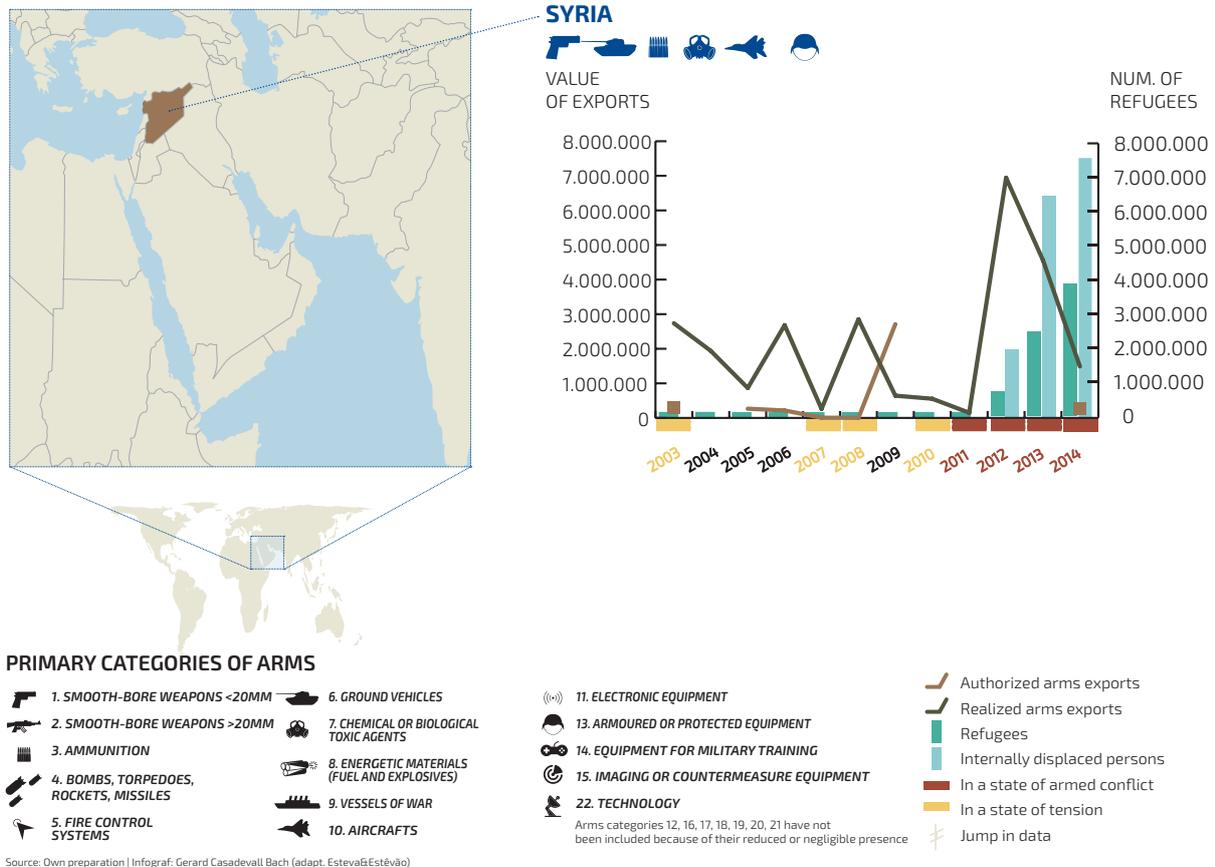

and 2010 stand out with 100 million € of authorized exports and 103 million of realized exports respectively. Of those exports effectively carried out in 2010, the main categories of weaponry correspond to explosive devices worth nearly 43 million euros and ammunition worth more than 39 million €, followed by small arms worth more than 11 million, and light-weight weaponry and artillery worth 4.5 million €. The fact that this type of weaponry constitutes the majority of exported material is even more controversial because it is armament that aggravates conflict and makes armed violence among the civilian population more feasible.

Iraq reached high figures of authorized and realized exports and demonstrated an increasing trend during the IP. As for refugees, the trend appears to be decreasing while that for displaced persons is variable. The weaponry includes a significant amount of light weapons, ammunition and explosives.

After the 2003 military occupation in Iraq, the country has experienced an environment of constant violence. However, this did not prevent arms exports to Iraq from increasing in 2005, 2009 and 2014. For the first year (62,331,909) €, Poland was the main exporter with 51,739,955 € in small arms, vehicles, tanks and aircrafts. In 2009, exports reached 100,483,970 euros, Italy being the main exporter of unidentified defense material worth 83,525,000 euros. Following the conclusions of the EU Foreign Affairs Council in mid-2014, it was agreed that some Member States would support the Iraqi Ministry of Defense by supplying military equipment due to the emergence of DAESH. In that same year, exports reached 123,237,635 euros with Bulgaria as the main exporter (80,118,708) of explosive devices, light weapons, artillery, vehicles, tanks and firing equipment. This significant resolution led Spain to re-authorize the sale of ammunition, explosive devices and military vehicles and tanks.

The case of Syria

Figure 3: Evolution of refugee/displaced populations and arms exports in Syria 2003-2014

Of all the countries in the middle east and in the world, Syria has the gravest conditions of instability in terms of its average refugees and displaced persons and situation of conflict. In this regard, it should be noted that the EU has maintained arms exports to Syria and reported artificially low official figures. Some data stands out while analyzing the 2003-2014 period of arms sales to Syria, like the steady continuation of export authorizations and a lesser but still constant realization of exports during the entire period.

The year after conflict broke out in 2011, the EU authorized its largest sale of weapons to Syria during the IP. It amounted to 6,943,049 € which, albeit a moderate figure, corresponds to military vehicles and tanks. The year 2013 also stands out with a figure of € 4,558,916 in authorized exports of new vehicles, tanks and chemical agents. In terms of realized exports, the highest volume was transferred in 2009 with a value of € 2,711,312. The weaponry included in this transfer is specified only as belonging to the "miscellaneous" category.

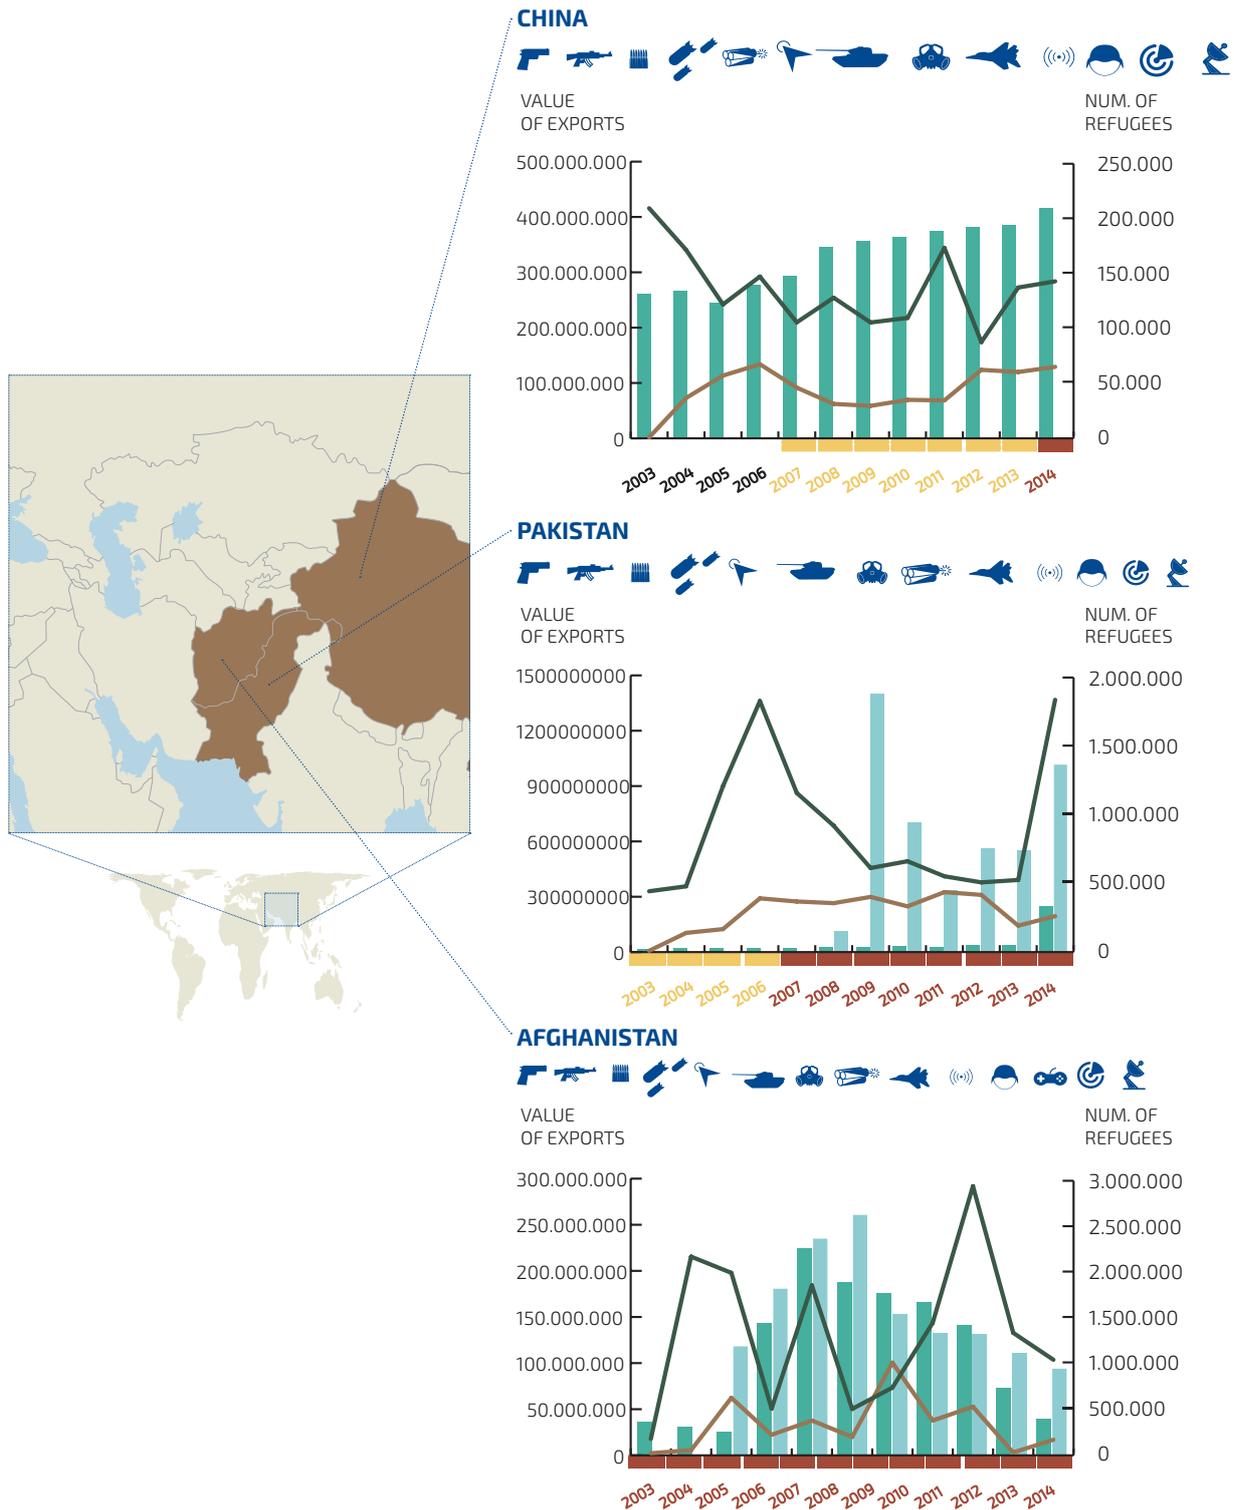

The authorizations of arms exports to Syria in the IP have reached the value of 25,673,392 euros. Realized exports account for 3,406,302 euros of the total and include the following categories of military material: aircrafts (267,000 euros in 2005 and 215,000 euros in 2006) by the Czech Republic and military vehicles and tanks from Ireland for 2,405 €. However, the largest export was made by Italy in 2009 for an amount of 2,711,312 euros with unspecified categories of military material. In 2012, a year after the outbreak of the conflict and the beginning of the forced mobilization of 729,022 refugees and 2,016,500 internally displaced persons, we observe an increase in sales authorizations of 6,943,049 euros. During this year, Germany and the United Kingdom authorized the sale of 6,935,429 euros and 7,620 euros in military vehicles and tanks respectively. In 2013, although authorizations fell to 4,558,916 euros, the number of refugees increased by 2,468,332 and the number of displaced persons increased by 6,520,800. The categories of material authorized in that year were vehicles and military tanks (4,362,507 euros) and chemical agents (196,409 euros) by Germany.

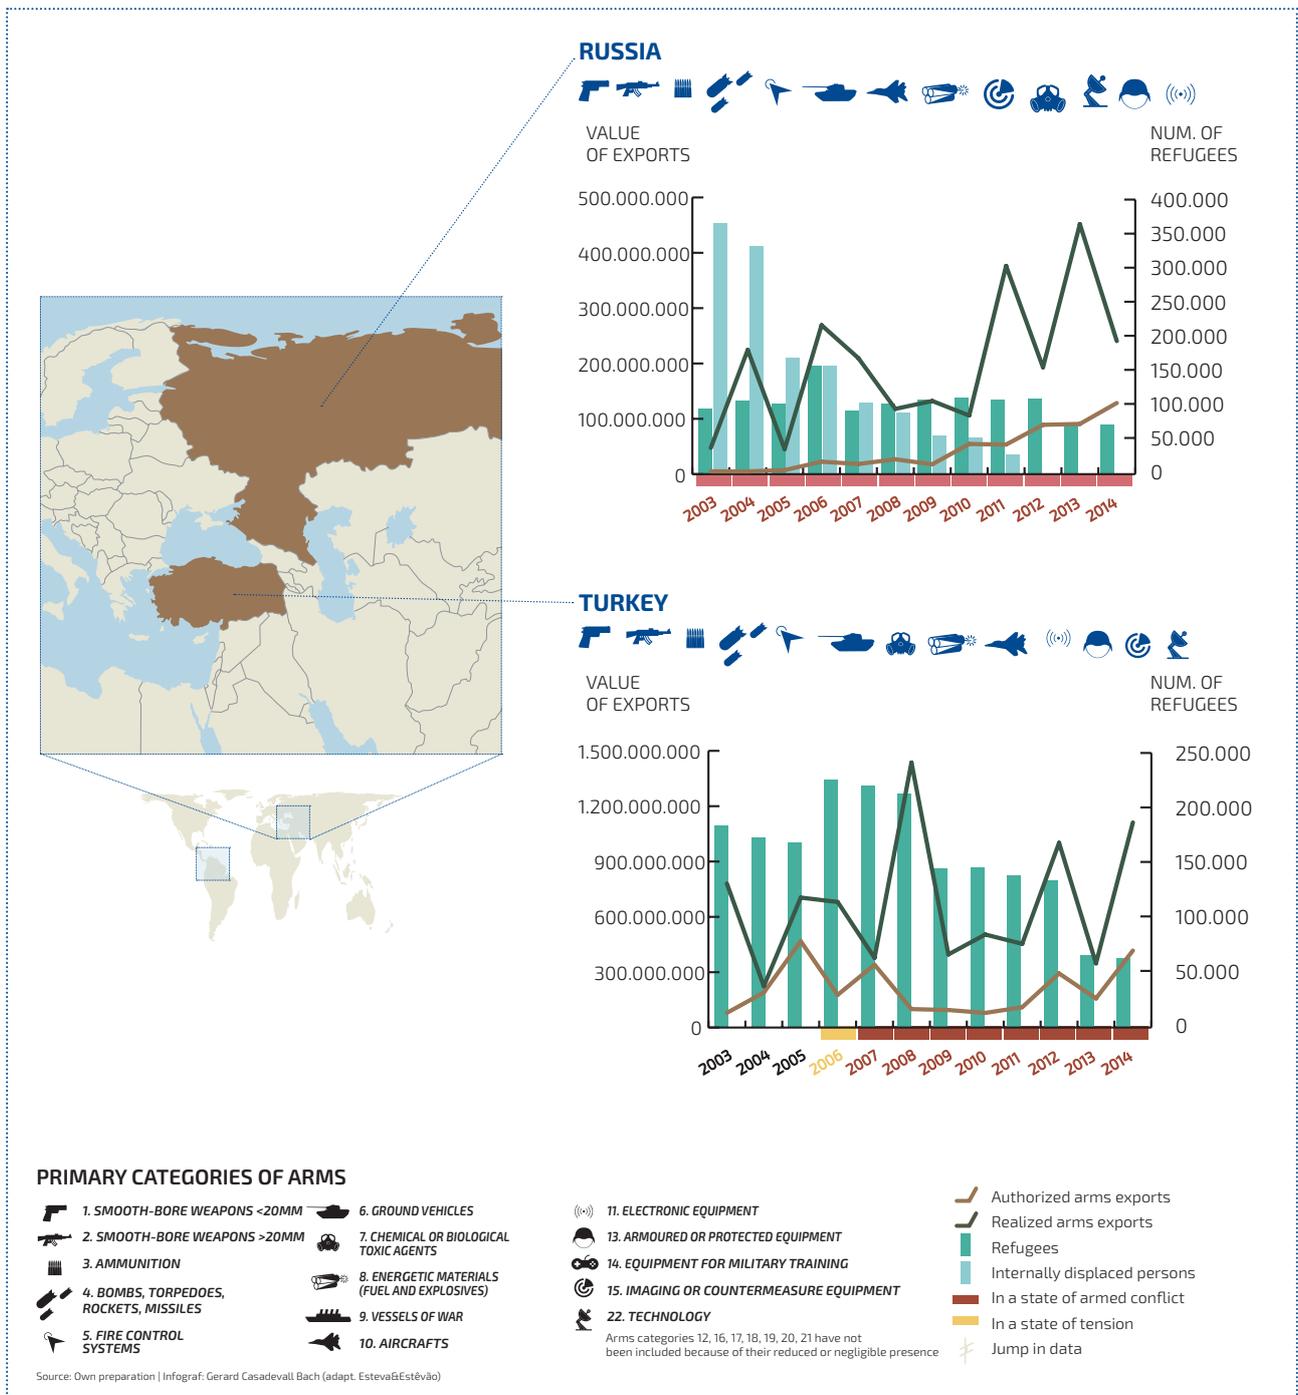

The situation of armed conflict in the country makes it likely that arms exports to this region are in violation of criteria stated in the Common Position. The high risk of diversion of imported military material into the hands of DAESH or other armed group is specifically

in contradiction with criterion 1, which problematizes the continued authorization of armaments by member countries like Germany (which exported chemical agents and military vehicles in 2012 and 2013) and Finland (which exported armor and helmets 2014).

Elevated arms exports figures to countries with unstable situations of security: Pakistan, China, Turkey, Iraq, Russia, Afghanistan and Colombia

Figure 4: Evolution of refugee/displaced populations and arms exports in China, Pakistan, Afghanistan, Russia and Turkey 2003-2014

Of the 26 countries under analysis, there are 8 that stand out for their high volume of EU arms imports and for their stagnant or worsening security situations. These countries are Pakistan, Turkey, China, Iraq, Russia, Azerbaijan, Afghanistan and Colombia.

In terms of refugee populations and security situations, Pakistan is the most controversial destination for European weapons. Although this country has been in conflict since 2004, has experienced a worsening security situation and also has an average of 964,858 refugees and displaced persons, both authorized and realized exports have remained constant throughout the entire IP. In the data collected in the annual report of the European Union,

it appears that the years with largest quantities of arms exports to Pakistan span from 2006 to 2012 with Sweden, France and Italy as the largest exporting countries.

Of the 26 controversial recipients, Turkey is the second largest buyer of EU arms and while its refugee population has decreased, its conflict has worsened. Turkey, moreover, is at the gates of the Middle East, situating it in a zone with high levels of conflict. The main conflict that characterizes the Turkish security situation is that related to Kurdistan, which resurfaced during the period 2007-2014. These years are also marked by elevated arms exports by France, Germany, Italy and the Netherlands.

Of the 2.507.436.728 euros exported during the period of study, 2014 stands out as the year when the most exports were made by EU member countries. The value of military material totaled 417,271,654 euros, made up of military aircrafts, firing equipment, ammunition, warships. During that year, Spain also became the country that exported the most weapons to Turkey with a value totaling 243,673,494 euros in aircrafts, warships and chemical and biological agents. Also significant are the exports of firearms, ammunition, bombs, firing systems, and warships made by Italy, France, Spain and Germany during the period of peace negotiations (2012-2015).

China is one of the main buyers of EU arms in tension and the third largest buyer of arms of the 26 especially controversial countries identified here. It also has a high average of 167,572 displaced persons that shows an increasing trend, and has experienced an evolution of conflict that evolved from tension into armed conflict during the IP.

Between Europe and China there is a dynamic arms trade that amounts to 3,255,508,557 euros during the period 2003-2014, of which 1,045,024,026 euros were successfully exported. Although exports from one year to another are consistently high, it is only from 2012 on that we begin to see exports rise above 100 million euros. Among the countries that exported the most were France, the Netherlands and the Czech Republic, and they exported the following military products: firing equipment, aircrafts, ships, vehicles and war tanks.

Arms exports to Russia indicated in the report by the European Union during our IP show that the most notable increase happened in 2014. Russian imports totaled 128,571,911 euros and has France (81,670.00 euros), Italy (26,345,400 euros) and Bulgaria (10,458,517 euros) as the main exporters of weaponry such as aircrafts and military vehicles. These exports were made in decree of the EU sanctions that regulate arms imports and exports to/from Russia because of their conflict with Ukraine and the risk of exported material ending up in Syria.

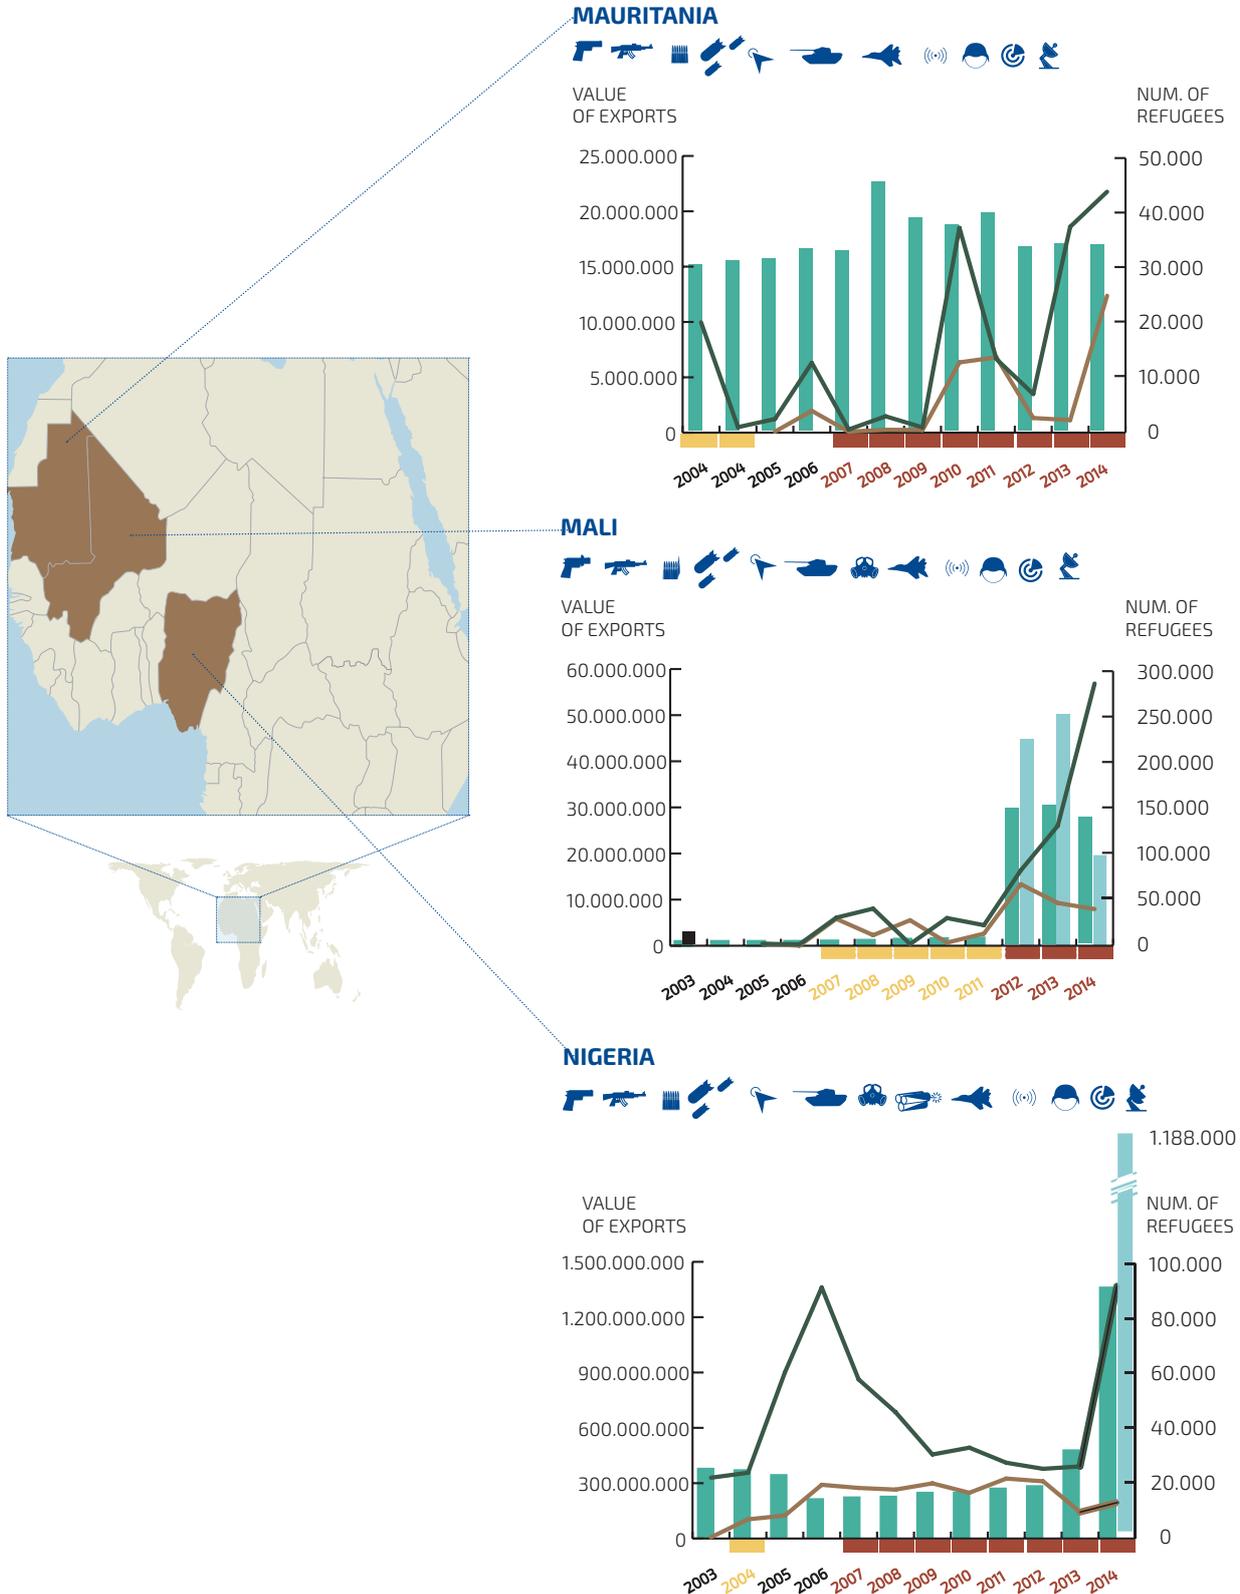

After 15 years of being in a central stage of the War on Terror, by the end of 2014 Afghanistan became the country with the second largest number of refugees after Syria (2.5 million). Bulgaria, Romania and the Czech Republic have been the highest exporting EU member countries, selling materials such as explosive devices, small arms, ammunition and military aircrafts. Between 2009-2010, one of the most violent periods since the beginning of the Afghanistan's military occupation in 2001, France, Germany and the United Kingdom authorized sales of firearms, military vehicles, tanks, aircrafts, firing equipment, ammunition and technology.

During the period, Afghanistan presents billion-dollar arms purchases, a constant number of refugees, a growing rate of displaced persons and an unimproved situation of armed conflict that began in 2001. Exports made to the country are constant during the IP despite the clearly unstable conditions, and two years stand out with regard to their values of authorized exports. The first is 2007, with 329 million € in categories such as vehicles and tanks, explosives, small arms, ammunition and light weapons and artillery. The other year is 2011, with € 465 million in the same categories.

Colombia stands out as the country with the highest number of refugees and displaced persons after Syria, with an average of 3,372,023 people. The majority are internally displaced, indicating that there is a high level of internal violence leading to displacements in the country. In addition, both the numbers of refugees and displaced persons have increased during the IP. As far as exports, authorizations follow an increasing trend while realized exports are variable from year to year. The year 2009 is noteworthy as it has the highest value of authorized exports in the period for a total of 150 million, 70 of which are light weapons and artillery, and 62 million of which are warships. The arms exports to Colombia comprise all categories, the largest being warships followed by light weapons and artillery.

Forgotten conflicts with little media attention in Sub-Saharan Africa: Democratic Republic of the Congo, Sudan, Nigeria, Central African Republic, Kenya, Burundi, Mali, Ethiopia, Mauritania and Zimbabwe

Between 2003 and 2014, EU states authorized sales of armaments worth 61,833,260 euros to DRC, of which 9,931,950 euros were effectively carried out. In 2003 the Czech Republic exported unknown military material worth 992,000 euros to DRC. Although it is true that sales after that year were lower, there was an increase during 2012 and 2013. For 2012 realized exports rose by 1,499,172 euros with Bulgaria and France as the main exporters of explosive devices, light weapons and technology. In 2013, sales were quadrupled by the same countries, resulting in a total worth 7,061,778 euros in the same categories of material and in an unspecified category. It should be noted that this year the categories of weaponry are most controversial, such as 3.7 million euros in explosives, 1.8 million in small arms, 1.4 in ammunition and 9 thousand in light weapons. As we have said before, it is important to note that there are countries with moderate or low volumes of exports whose categories of weaponry make them nonetheless controversial. These weapons are those that have the greatest civilian impact and that allow large quantities of arms to be acquired without large investments. The case of DRC is especially serious because of its decade long and extremely violent conflict that shows no signs of improvement and generates increasing levels of displaced persons. The increase in exports between 2012-2013 resulted in an escalation of violence be-

tween the Congolese armed forces and rebel groups in the east of the country, contributing to the generation of more than 500,000 refugees and almost 3 million internally displaced persons.

Another long-standing conflict with no signs of improvement and serious humanitarian violations exists in Sudan, which imported a total value of € 31 million worth of arms and demonstrates a trend of growing displaced populations. The trend of exports, however, is decreasing, especially in the category of vehicles and tanks. Thus, Sudan is a case where there was clear intention and materialization of european arms exports in the beginning of the IP but shows tendencies toward ending by the end of the period. This trend is accompanied by increasing flows of refugee and displaced populations and a permanent context of armed conflict in some regions of the country. Sudan recorded the largest number of arms imported from Europe in 2006 (565,349 €) in vehicles, tanks, armor and other unknown materials from Slovakia, France and Germany, and in 2008 for a value of 293,671 euros in vehicles and military tanks by the Czech Republic. Since 2005 there has been a steady increase in Sudan's number of internally displaced persons which reached 2,115,500 by the end of 2014.

Nigeria imported 1,001 million € worth of european

arms, showing some constancy in authorized exports and consistent increases in realized exports. Authorizations were highest in 2014, with a total of 201 million €. Authorizations of ammunition were worth 81 million, followed by 21 million in explosives and 5.6 in light weapons and artillery.

Nigeria registered its largest number of weapons between 2007 and 2009. In the first year, 23,947,579 euros were imported, with Italy and France being the main exporters of military equipment. The same scenario occurred in 2008, with 36,798,050 euros in the same category. Since the internal conflict with Boko Haram entered a rapid spiral of violence in 2009, France, Britain and Bulgaria increased their arms authorizations to Nigeria. In that same year Italy became the main exporter (43,944,691 euros) in the miscellaneous category, followed by France with 12,677,555 euros in the same category. During 2014, the Czech Republic has been the country with the highest exports to Nigeria (3,865,811 euros) in ammunition, vehicles, tanks, aircraft and armor categories. The result has been a clear increase in the number of refugees and an alarming number of IDPs in 2014, exceeding one million people who were forced from their homes.

In the Central African Republic, authorizations stand out in 2010 at a value of 4.7 million and categories of weaponry such as vehicles and tanks, 2.8 million in explosive devices, 2.5 in ammunition and almost 1 million in small arms. This country has been experiencing a new phase of armed conflict since 2007, but prior to this outbreak Slovakia and France were the countries with the largest authorizations and exports of ammunition, armor and aircrafts to the region. In 2010, Portugal became the country with the highest value of realized exports of military aircrafts worth a total of 2,685,623 euros to CAR. This same export was repeated in 2012 and in 2013. In 2014, Finland was the only country that exported in the armor category for a value of 91,416 euros. In that same year the United Kingdom and Germany have the most authorizations made for vehicles, tanks and military explosives. Small values of exports should not be misleading since in many cases the authorizations are for significant quantities of small arms with low unit costs. The result of CAR's continual arms imports has been a large number of refugees and displaced persons in an environment of growing insecurity.

Kenya is another country that has been predominantly in tension during our IP with no view of improvement and with consistent increases in refugees and displaced persons. Kenya has played a leading role throughout the analysis period with EUR 167.737.134

worth of European arms licenses and realized exports worth 68.601.361 euros. In 2007, 6.887.948 euros were exported in ammunition and small arms. In 2008 exports amounted to 14.491.370 euros by France mainly in the miscellaneous category. During the year 2014, arms exports worth 2.856.242 euros were carried out by the Czech Republic (1,342,511 euros for aircraft, ammunition and explosive devices), and Spain (748,250 euros in ammunition) and Italy (472,500 euros) in the miscellaneous category. The situation of tension has continued in Kenya, whose number of refugees and displaced persons stands at an average of 370 thousand and continues to increase.

While Burundi has experienced an ultimately worsening situation of tension and conflict throughout the period, the refugee population has decreased while the displaced population has varied. European exports to Burundi show very inconsistent trends in authorizations, with large information gaps for several consecutive years. This may be due to the lack of information provided by the United Kingdom (which has not been reported since 2002), but the UK does appear to be an important exporter to this country in regards to export license authorizations. The main export categories are ammunition, light weapons and artillery, although these materials have not been imported in large volumes. Thus, Burundi has registered arms exports for a clearly reduced value of 207,326 euros compared to the 19,783,360 euros that appear in the EU reports on authorizations. During the period 2003-2005 in which Burundi was still embroiled in an armed conflict, there are miscellaneous exports by Germany worth € 11,000 in 2005. While these export figures are not alarmingly high, the material exported is questionable; there have been authorizations for small arms, aircraft, ammunition and armor from France, Belgium and the United Kingdom during the tenure period from 2007 to 2010, and in 2011 armed conflict erupted once again. The same spiral into war took place in the year 2014, when there is recorded exports of light weapons, artillery and ammunition by Bulgaria.

During the July-September quarter of 2012 several armed groups increased their control in northern Mali, a country that has been marginalized and underdeveloped since colonial times. In 2012, at a time when these armed groups were particularly active, arms exports by some of the EU Member States increased by EUR 13,346,014 in aircrafts, explosive devices (bombs, grenades, missiles), vehicles, tanks, light weapons, ammunition and unidentified categories with Bulgaria (13,210,774 euros) and France (135,240 euros) as the main exporters. In countries like Mali, whose internal armed conflict and instability have intensified in recent

years, we note that the highest authorizations of armaments took place in 2013 and 2014. In just 2013, authorizations amounted to 25.986.807 euros, of which Germany, France and Bulgaria were the main establishers of licenses. Of this amount, only 9,276,598 euros were effectively exported in categories such as ammunition, aircrafts, small arms, light weapons and explosive devices. In 2014, 56.859.498 euros were authorized, with France in the lead with 54,430,176 euros in permits in vehicles and tanks as well as shooting equipment. Of those authorized in that year, only 7,951,232 euros were realized, with France, Portugal and Slovakia being the main exporters.

Thus, Mali is another example of a country whose security situation has worsened during the IP, with growing rates of refugees and variable rates of displaced persons. The year 2012 stands out as having the highest value of authorized exports (more than 13 million), of which 2.7 million are for explosive devices, 1.3 for small arms and 1.2 for light weapons and artillery.

Ethiopia is another country whose situation worsens during the IP, evolving from tension to armed conflict with a growing average of refugees. Noteworthy are the authorizations made in 2013, where the highest authorization of the period was made for 35 million with more than 2.7 million in ammunition, followed by aircraft and electronic equipment. When armed conflict began in 2007, the highest value of arms

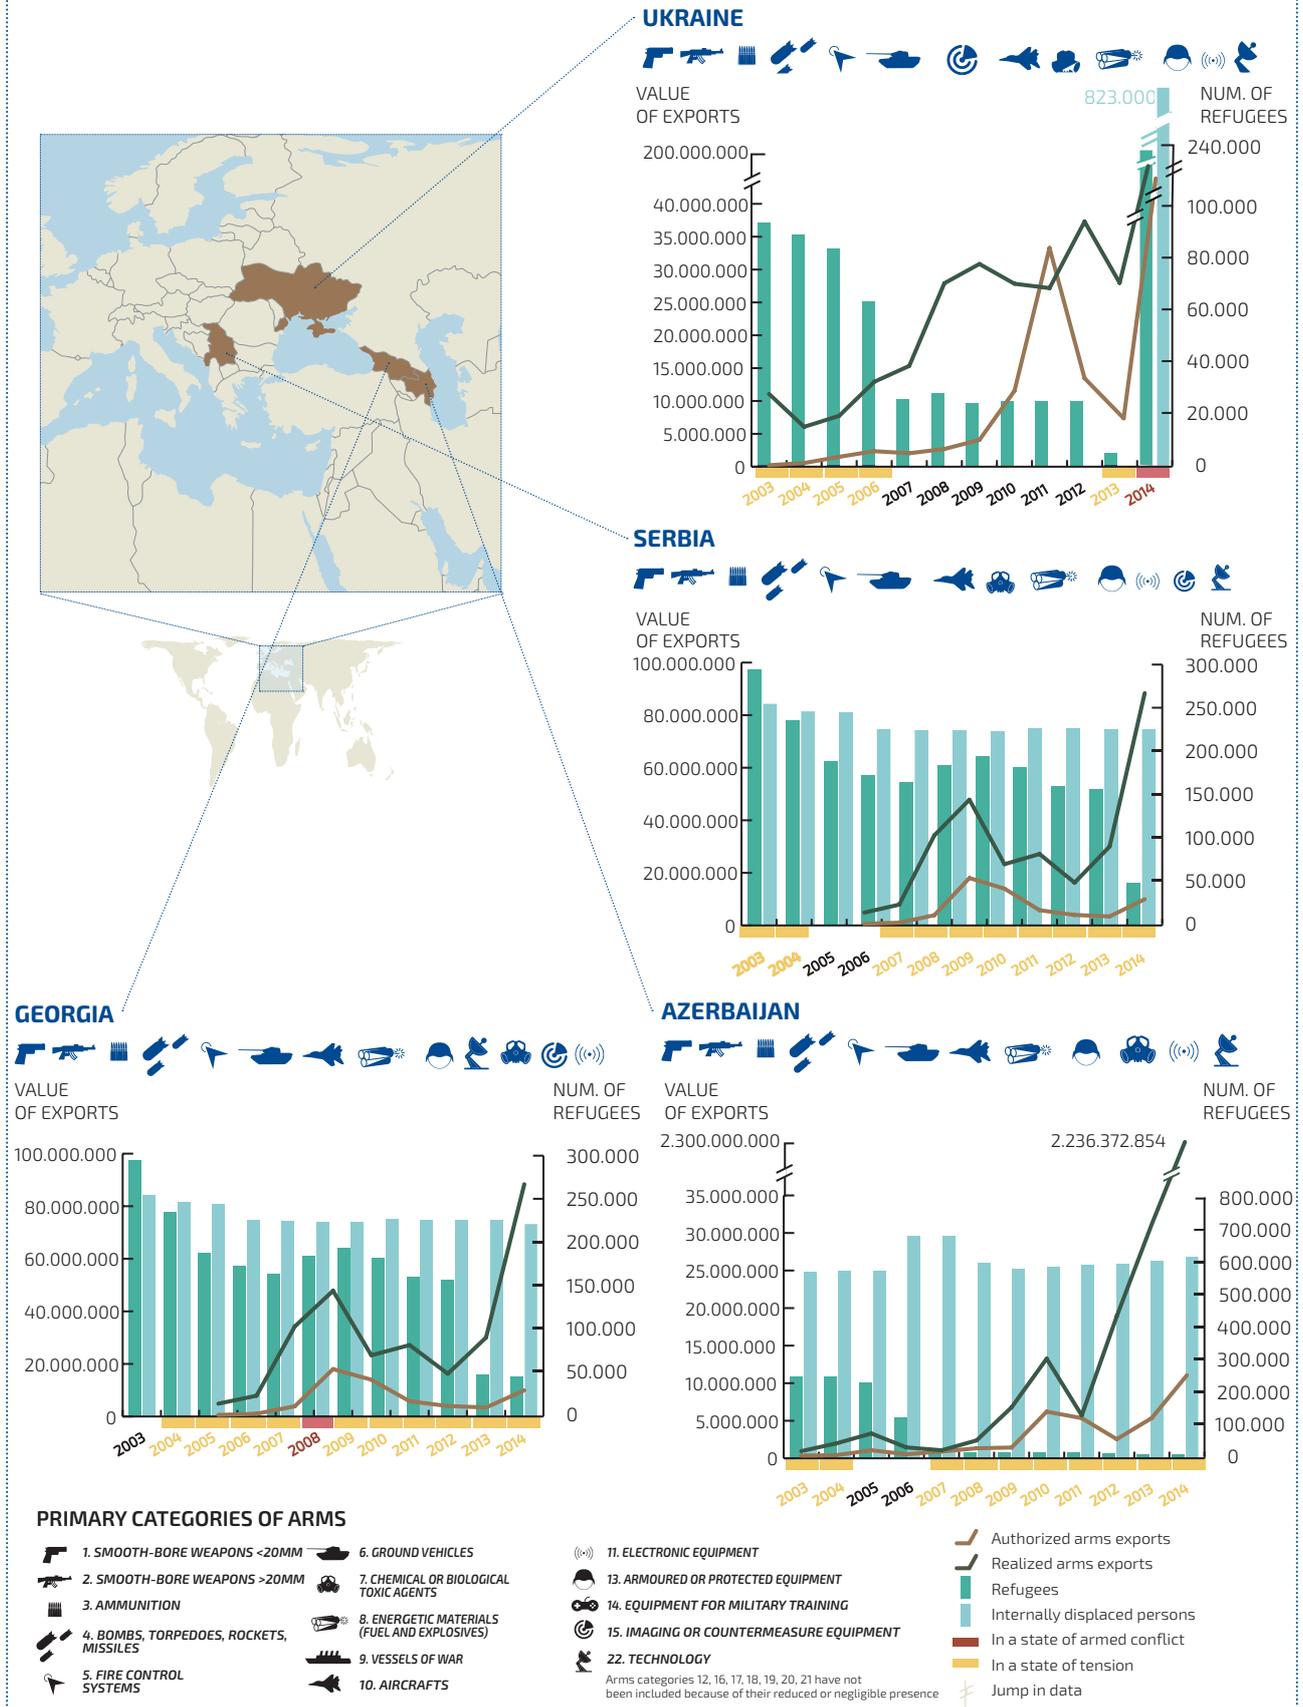

exports worth 11.896.772 euros was made, with the Czech Republic and Bulgaria as the main exporters of simulation equipment, small arms, aircrafts, ammunition, firing equipment, military vehicles and tanks. France also exported material in the miscellaneous category. From this year until 2014 exports decline, but Bulgaria and the Czech Republic continue to be the main players in the sale of military equipment to Ethiopia. An increasing number of refugees show how the deterioration of the country's security situation has affected the lives of its civilian population.

Mauritania was the recipient of arms exports worth 30,623,051 euros during the IP. Bulgaria, France and Italy were the leading exporter countries and the main materials exported were firearms, ammunition and aircrafts. 2014 has been the year with the most miscellaneous exports, worth a total of 12,367,300 euros by Italy and France. Mauritania has also experienced worsening conditions of security during the period, but has had a constant average of refugees and no displaced persons.

Zimbabwe has also witnessed a deterioration of its security situation and has average numbers of refugees and displaced persons. Export figures to this country are very low, totaling a value of 27,838 €. It should be noted that the United Kingdom is one of the main exporters in authorizations to Zimbabwe, and data for the UK disappears after 2002 causing us to face serious gaps in information.

Conflicts at the doors of Europe: Ukraine, Serbia, Georgia and Azerbaijan

Figure 6: Evolution of refugee/displaced populations and arms exports in Ukraine, Serbia, Georgia and Azerbaijan 2003-2014

In 2014, Ukraine shifted from being a country in tension to one in armed conflict. Ukraine stands out for its increasing trend of refugees and displaced people which stands at an average of 883,762, falling just behind Pakistan yet without having such a long-standing conflict. Noteworthy is 2014, where Ukraine imported arms worth 199 million in categories with high potential for impacting conflicts, like 23.9 million in explosives, 19 million worth of ammunition, 4 million in chemical agents, 2.2 million in small arms, and 1.2 in shooting equipment. In 2011, realized exports totaled over 33 million, the third most exported category being 1.1 million for small arms followed by values of explosive devices and ammunition that do not exceed one million €.

As a result of the armed conflict in Ukraine, EU states increased the authorization of arms sales in 2014 to € 199,686,642, of which 18,850,368 € were exported ammunition, vehicles, tanks, aircrafts, light weapons, small firing equipment, manufacturing equipment and technology. Among the main exporters were countries like Poland (9,081,308 euros); Austria (3,577,423 €), Czech Republic (2,124,300 €) and France (1,630,000 €). Spain is also noteworthy for its exports of small arms (shotguns and hunting rifles), on the grounds that the other countries of the European Union resuming their exports to Ukraine violated criterion 3 of the Common Position. Numbers of refugees and displaced people soared as a result of the high levels of violence in parts of Ukrainian territory.

Years after the end of the Balkan war, Serbia remains in conditions of grave instability without any indication of improvement. The country's refugee population steadily decreases over the period of investigation while its displaced population remains constant. Exports over the period amounted to € 340 million, with 2014 having a total of € 88.3 million in authorized exports. The primary category of exported material is € 44 million in ammunition, followed by € 8.3 million in small arms and 4.7 in explosives.

After the end armed conflict in Serbia, the years 2003-2014 were characterized by a period of internal political tensions. In 2014, Bulgaria was the top exporting country to Serbia in categories such as ammunition, light weapons, explosives and artillery for the amount of 7,909,239 euros, followed by France for 1,230,000 euros in unknown military equipment. The other years with the highest rates of exportation were 2009 and 2010, totaling 18,035,832 euros and 13,999,429 euros respectively. In 2009, the largest exporters were France (14,078,559) in the miscellaneous category and Bulgaria (€ 1,592,927) in ammunition, small arms, and unknown military equipment.

For 2010, the main categories of exported materials were ammunition by Bulgaria and unknown material by France.

Georgia is also a country with permanent tensions which contribute to an stagnant state of instability. The average number of refugees in the country is variable while the population of displaced persons remains constant. Authorized and realized exports during the period total € 995 million with varying trends in each category. Noteworthy is the year 2008, with 266 million in exports and a whopping sum of 172 million euros in ammunition, 52 million in explosive devices and 14.8 million in light weapons and artillery. 2008 stands out for its figures of realized exports, with a total of 91 million euros in the categories of ammunition (56 million), explosive devices (25 million) and light weapons/artillery (3 million).

In arms authorizations to Georgia between 2003 and 2014, 778,633,795 euros were registered, of which 216,624,305 euros were actually exported. From this period, Bulgaria (€ 114,323,460) and the Czech Republic (€ 50.69.887) were the highest exporting countries to Georgia in the categories of ammunition, explosive devices, small arms and light weapons, military aircrafts, vehicles and tanks, armor, manufacturing equipment and military technology. The largest values of exports were recorded in 2007 and 2008. In 2007, 62,433,659 euros was exported in the same arms categories, and during 2008—the year that Georgia began armed conflict with Russia in the War of South Ossetia—91,500,334 euros were exported in ammunitions, explosives and weapons. Bulgaria was again the principal exporter, followed by Czech Republic.

Azerbaijan has imported a value of 2.359 million € in authorized and realized European arms exports and is experiencing an unimproved state of tension with constant numbers of refugees and displaced persons. The volume of authorized and realized exports remains fairly low until the last year of our analysis, 2014, when there is an increase in authorized exports of 2,236 million € which is almost as much as every other year in the period combined. The trend for realized exports, however, remains constant and relatively low. During the period we find a considerable amount of exports in categories such as light weapons, small arms and explosives.

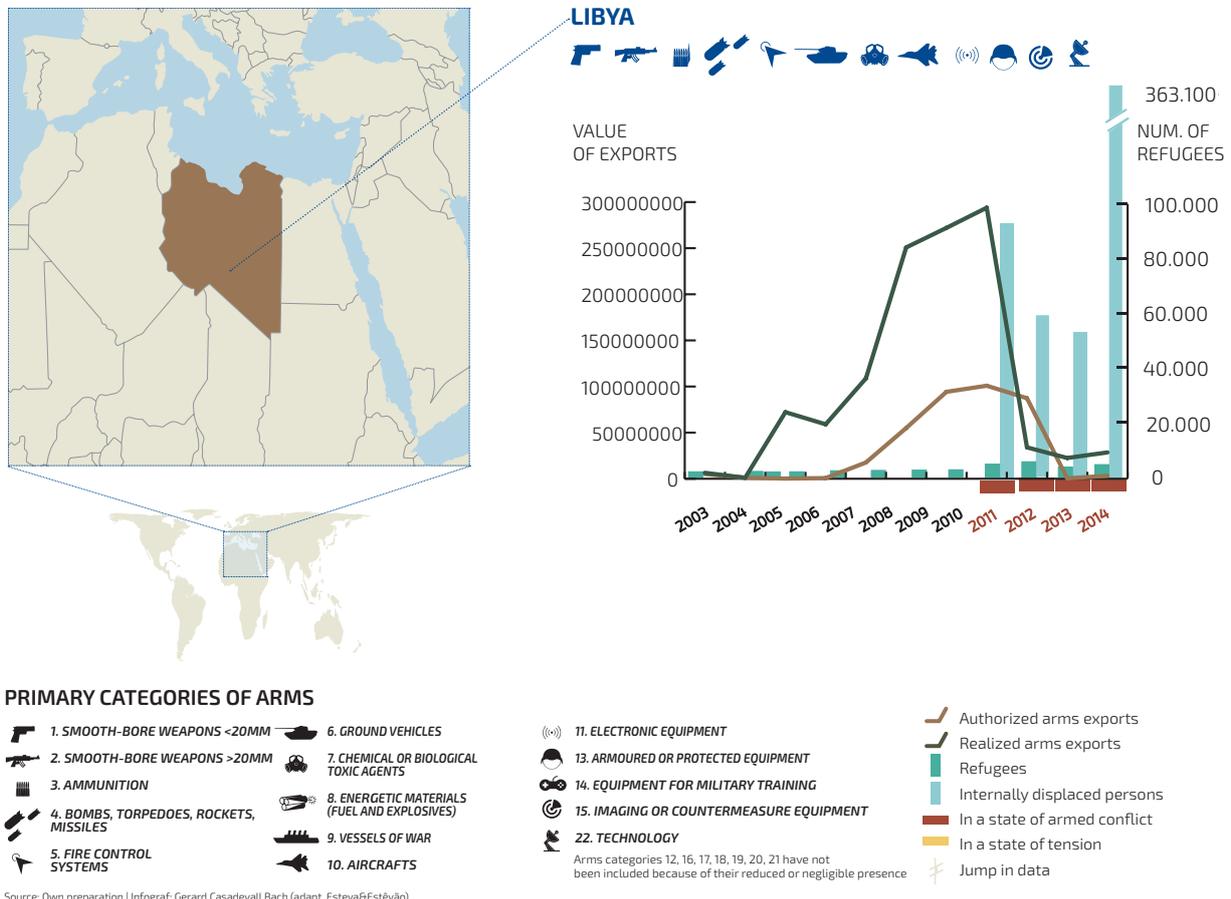

Azerbaijan is in a state of unresolved conflict with periodic violations of the established ceasefire and high numbers of refugees and displaced persons. Given this context, 36,585,230 euros of arms were exported there in the period 2003-2014, the high-

est value being in 2014 (11,065,700 euros). That year Bulgaria led with 5,395,768 euros (\$6.16 million) in exports of ammunition, explosive devices and light

weapons followed by Croatia with 2,443,600 euros in armor and Czech Republic with 1,915,663 euros in military aircrafts and small arms.

The case of Libya

Figure 7: Evolution of refugee/displaced populations and arms exports in Libya 2003-2014

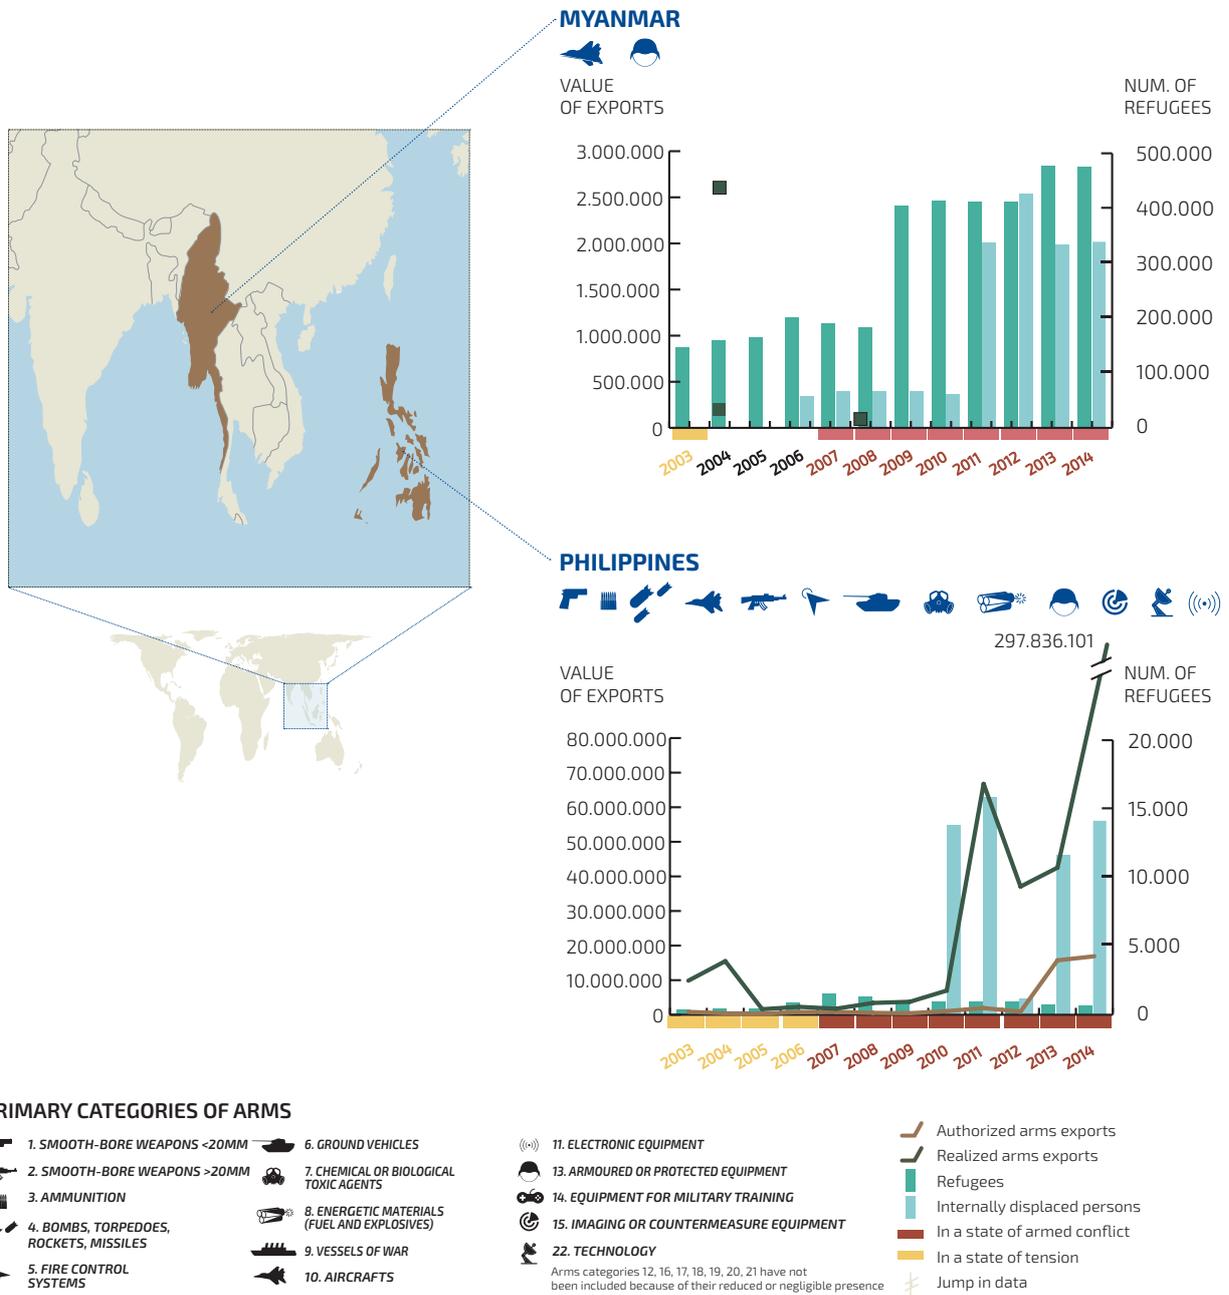

Libya is also a particularly controversial case as it has gone from not being in conflict or in tension to a state of armed conflict in 2011, with rising numbers of refugees and displaced persons. Despite its security situation, Libya is one of the largest importers of European arms. The most remarkable year is 2010 just before the conflict erupted, when 293 million euros worth of arms authorizations were made in controversial categories—44.9 million in firing equipment, 41 in explosive devices, 6.9 in ammunition and almost 1 million in small arms.

During the armed conflict in 2011, France exported weapons of unknown material worth 87,307,350 euros. One year before the war, 100.871.872 euros

were exported, the main exporters being France (88,368,069 € in unspecified categories) and Spain (11,247,098 €) in military imaging equipment and aircraft). After Gaddafi's death, Libya has remained immersed in a civil war which is sustained by a variety of militias that base their legitimacy largely on armed force. During 2014 specifically, there has been a high level of violence in Libya due to clashes between anti-Gaddafi sectors and supporters of the old regime and easy access to weapons in the country. In that year, Czech Republic and Spain were the main arms exporters. The former exported 299,051 € in chemical and biological agents, while Spain exported chemical agents and armor elements worth 278,671 €.

European arms in other conflicts in Asia: Myanmar and the Philippines

Figure 8: Evolution of refugee/displaced populations and arms exports in Myanmar and the Philippines 2003-2014

Myanmar presents a complex internal situation that vacillates between tension and armed conflict during the period, with an increasing average of refugees and a variable population of displaced persons. Myanmar imports the second lowest value of EU arms after Zimbabwe, with only 2 million euros for imports of aircraft and armor.

Although there were no arms exported to Myanmar during its period of armed conflict (2007-2014), according to the European Union report on arms ex-

ports, in 2005 there was a sale of arms worth 37,300 euros in aircrafts by Poland. That same year, Poland also authorized a sale of military aircrafts worth 2,558,023 euros which is the biggest sale for this country during the IP. There was also a sale of armor authorized in 2012 by the United Kingdom for a value of 49,720 euros.

The Philippines has experienced a state of permanent conflict during the investigation period with no signs of improvement. The numbers of refugees in

the country are variable and the displaced population appears to grow. Arms exports to the Philippines, however, are significant: € 520 million for the period with a rising trend, with authorizations reaching their peak in 2014 with a figure of 297 million. During that year the main exported categories were explosive devices at 19.8 million, 15.7 million in ammunition, 9 in chemical agents, 7.9 in firing equipment and 2.7 in small arms.

The Philippines has received exports worth 40,723,070 € in the period between 2003 and 2014, 2013 and 2014 being the years of highest rates of exportation. In 2013, there was an increase of 15,731,338 euros with Poland and Bulgaria as the main exporters of aircrafts, electronic equipment and explosive devices. In 2014, there was 16,908,326 euros worth of military and explosive materials exported primarily by Italy and Bulgaria.

4. CONCLUSIONS

Exporting member countries of the EU have decided to authorize export licenses or effectively transfer arms to countries that have demonstrated a significant situation of vulnerability for the civilian population through indicators of instability and movements of populations as shown by:

- The value of European arms authorizations and exports during the period of 2003-2014 totals 453,167,283,624 euros, of which at least 119,018,062,448 € of exports have been effectively carried out. The member states of the EU exported arms to 212 destinations, of which 89 have presented significant numbers of refugees or displaced persons and of which 65 are in conflict or unrest.
- 29% of European arms exports from 2003 to 2014 (122 billion) were committed to places in conflict and/or tension, resulting in a total of 37.281 million euros in realized exports to these countries.

There have been arms exported from the member countries of the EU to countries in situations of conflict or tension where there are significant numbers of refugees and displaced persons because:

- There are 39 countries whose unstable conditions and fluxes in population could indicate that these imported arms are being used in conflict, despite the implications that this might have for the country's security. These countries make up 8.1% of the authorized recipients of exports and 9.2% of the importers of realized exports, or 36.714 billion euros and 10.9 billion euros respectively. Fifteen of these countries have experienced worsening conditions of security and another sixteen have conditions that have remained stagnant. Only eight countries have presented positive changes according to the indicators we have taken into account.

Specifically:

- Nigeria, Pakistan, Yemen, Mali, China, Turkey, Libya, Ethiopia, Venezuela, Ukraine and Mauritania have received huge quantities of European arms of significant economic value and all of them have demonstrated continually aggravated situations of violence.
- Myanmar, CAR, Burundi and Zimbabwe also have suffered worsening conditions of security and have received European arms, but in relatively smaller quantities.

- Colombia, Afghanistan, Iraq, Azerbaijan, Serbia, Russia, Kenya, Georgia and the Philippines have been important importers of European arms and have all maintained a level or relative conflict.

- Syria, DRC and Sudan have imported relatively small values of arms (between 20 and 100 million euros), but are still worthy of consideration based on the type of arms imported, their worsening conditions of stability and their elevated rates of refugees and displaced persons.

- Somalia and South Sudan are both in situations of armed conflict which have not improved, with very high rates of refugees and displaced persons that continue to grow

There is evidence that arms exports have aggravated or perpetuated armed violence in certain countries, leading to higher rates of refugees and displaced persons or preventing these populations from returning to normal living conditions because:

- In 26 of the primary recipients of European arms with fluxes of refugees and displaced persons, the impact of arms imports is correlated with a negative evolution or perpetuation of conflict. These countries make up 7.4% of the authorized exports and 7.8% of realized exports, or 33.61 million euros and 9.32 million euros million respectively. These 26 countries have generated 75% of the refugees and displaced persons during this period (27.2 million people).

- The Middle East is an especially violent and unstable area of the 14 countries that make up this region, as more than half are in armed conflict or situations of tension (five in armed conflict and three are in tension). This region produces 17% of refugees and 31% of displaced persons in all the world even without considering the elevated rates of Palestinian refugees. Despite these indicators of instability, arms shipments to the region have continued uninterruptedly. Saudi Arabia, Egypt, Israel and Iraq are the principal purchasers of European arms that are in situations of conflict or tension. Syria has the greatest number of refugees and internally displaced persons in the world and has experienced a steadily worsening situation of armed conflict. Yemen's conflict has also worsened, while Iraq's has remained stagnant.

- In the four countries with the most significant war-time conditions, direct or indirect participation of

member countries of the EU has caused an increase in the number of refugees and displaced persons during the last few years which reached 20.3 million in 2014. All of these countries are in armed conflict. The value of arms exported to these countries has also been very high, reaching nearly 4 billion in recorded authorizations (3.960 million) and surpassing the billion mark in realized exports (1.036 million). It is worth mentioning that these figures do not relate to Syria, where the official transfer of arms is practically nonexistent. Nevertheless, the export of arms to these four countries in significant situations of armed conflicts demonstrates that the EU is practicing a clearly irresponsible policy of exporting arms. Furthermore, we can confirm that 20 million people in 2014 have fled their homes as a result of the instability that war has generated in their home countries and that these wars employ significant volumes of European arms.

- Sahel es a zone whose worsening prevalence of armed violence points to particularly negative expectations for the future. Libya, for example, has been a significant importer of European arms, and the exacerbation of the country's instability has caused many of the imported arms made in Europe to end up in the hands of all kinds of armed factions in an unresolved armed conflict. This conflict is not only responsible for thousands of deaths and injuries, but also for 363 thousand refugees in 2014. A large portion of EU member countries, amongst them Austria, Bulgaria, Czech Republic, France, Germany, Italy, Portugal, Poland, Slovenia, Spain and the United Kingdom, have been the primary beneficiaries of the profits made from the arms exports to Libya. For this reason, these countries are jointly responsible for the flight of more than 300 million people from their homes. The same case has occurred in Mali and Mauritania, which have seen a simultaneous increase of arms imported from the EU to their territories and an emergence of refugee and displaced persons populations. In Mali and Mauritania, the countries primarily responsible for the shipment of these arms are France, the United Kingdom, Czech Republic, and, in the case of Mauritania, Spain.
- The principal recipients of European arms in Sub Saharan Africa that have maintained significant quantities of refugees and displaced persons while

in conflict or tension are Ethiopia, Burundi, Kenya, Central African Republic, Nigeria, the Democratic Republic of the Congo and Sudan. These seven countries have collectively accumulated 8.4 million people living away from their homes as a consequence of the instability of the region in 2014. Europe has authorized and carried out the effective sale of all types and calibers of arms, surpassing 1,400 million authorizations and 330 million in realized exports. Of these countries, Nigeria, Ethiopia and Kenya have received the highest quantities of arms. The rest of the countries (CAR, RDC, Burundi and Sudan) are destinations identified as having scenarios of armed conflict or serious tensions during much of the period with high flows of refugees and displaced persons, and even though they have been able to receive European weapons, they have been small amounts. However, we recall that this is largely due to the low unit cost of the military product exported here. The situations of security in these countries during the period under consideration have worsened in Ethiopia, Burundi, the Central African Republic and Nigeria, and have not improved in Kenya, the Democratic Republic of the Congo and Sudan.

- The member states of the EU have exported arms to the following destinations with verifiably unstable and violent conditions: Ukraine, Georgia, Serbia and Azerbaijan. The monetary value of these exports totals 4,227 million euros, including 14 billion authorized exports and 3.4 million in realized exports based on the official information that we have. The emergence of more than 2 million refugees and displaced persons in 2014 demonstrates that this progression has been considerably negative. Europe continues to have a significant number of people forced to live away from their homes, despite or at the cost of an intensive rearmament of their main countries in conflict. Of all of them, none has improved and Ukraine has worsened.
- Five Asian countries with particularly sensitive security situations and with significant numbers of refugees and displaced persons have received weapons from the EU, with values of \$4.15 million exported and \$13.28 authorized. These countries are the Philippines, Myanmar, China, Sri Lanka and Pakistan, and these countries generated more than 3 million refugees and displaced persons in 2014.

ANNEX 1

TABLE 1: REFUGEE POPULATIONS BY COUNTRY/TERRITORY OF ORIGIN IN SITUATION OF ARMED CONFLICT (2003-2014)

Country		Average number of refugees 2003-2014	Evolution in the period	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014
Afghanistan	CONFLICT	2.443.487	constant	2,136,020	2,084,925	1,908,052	2,107,519	1,909,911	2,833,128	2,887,123	3,054,709	2,664,436	2,586,152	2,556,502	2,593,368

Countries analysed
Situation of tension
Situation of armed conflicts

Source: Calculations based on European Union Arms' Export reports and the Escola de Cultura de Pau databases. 1. Most of the countries provide the amount of the value of exported goods. Germany and United-Kingdom are notable exceptions. United-Kingdom has not reported on its exports realized since 2002, and Germany stopped doing it in 2007, therefore figures would likely be higher. 2. Figures only show known values and are inevitably incomplete due to differences among countries' reporting.
